Original Instructions

Read this manual before using product. Failure to follow instructions and safety precautions can result in serious injury, death, or property damage. Keep manual for future reference.
We strongly recommend that all personnel associated with this equipment be trained in the correct operational and safety procedures required for this product. This product has been designed and constructed according to general engineering standards, other local regulations may apply and must be followed by the operator. Use the sign-off sheet below to record initial and periodic reviews of this manual with all such personnel.

1. Introduction

Thank you for purchasing a Hutchinson Portable Grain Belt Conveyor. This equipment will allow safe and efficient operation when you read and follow all of the instructions contained in this manual. With proper care, your conveyor will provide you with many years of trouble-free operation.

Keep this manual handy for frequent reference and to review with new personnel. A sign-off form is provided on the inside front cover for your convenience. If any information in this manual is not understood or if you need additional information, please contact your local distributor or dealer for assistance.

This manual should be regarded as part of the equipment. Suppliers of both new and second-hand equipment are advised to retain documentary evidence that this manual was provided with the equipment.

1.1. Serial Number Location

Always give your dealer the serial number on your conveyor (shown below) when ordering parts or requesting service or other information. Please record this information in the table below for easy reference.

<table>
<thead>
<tr>
<th>Model Number</th>
<th>Serial Number</th>
<th>Date Received</th>
</tr>
</thead>
</table>

1.2. Intended Use

The conveyor is designed solely for use in the intended agricultural use as listed below. Use in any other way is considered as contrary to the intended use. Compliance with and strict adherence to the conditions of
operation and maintenance as specified by the manufacturer, also constitute essential elements of the intended use.

The conveyor should be operated, maintained, serviced, and repaired only by persons who are familiar with its particular characteristics and who are acquainted with the relevant safety procedures.

Accident prevention regulations and all other generally recognized regulations on occupational health and safety must be observed at all times.

Any modifications made to the conveyor may relieve the manufacturer of liability for any resulting damage or injury.

**Intended use for the conveyor:**

- Handling grain, pulse crops, treated seeds, or other similar materials.
- Handling fertilizer when strict operation and cleanout procedures are followed as noted in Operation section.

Use in any other way is considered as contrary to the intended use and is not covered by the warranty.

1.2.1 Misuse

Do not use the conveyor for/with:

- transferring material other than dry, free-flowing food-grains.
- conveying canola, or any other oilseeds
- lifting or using as a hoist or crane.
2. Safety

2.1. Safety Alert Symbol and Signal Words

This safety alert symbol indicates important safety messages in this manual. When you see this symbol, be alert to the possibility of injury or death, carefully read the message that follows, and inform others.

Signal Words: Note the use of the signal words DANGER, WARNING, CAUTION, and NOTICE with the safety messages. The appropriate signal word for each message has been selected using the definitions below as a guideline.

- **DANGER**: Indicates an imminently hazardous situation that, if not avoided, will result in serious injury or death.
- **WARNING**: Indicates a hazardous situation that, if not avoided, could result in serious injury or death.
- **CAUTION**: Indicates a hazardous situation that, if not avoided, may result in minor or moderate injury.
- **NOTICE**: Indicates a potentially hazardous situation that, if not avoided, may result in property damage.

2.2. General Product Safety

**YOU** are responsible for the SAFE use and maintenance of your conveyor. **YOU** must ensure that you and anyone else who is going to work around the conveyor understands all procedures and related SAFETY information contained in this manual.

Remember, **YOU** are the key to safety. Good safety practices not only protect you, but also the people around you. Make these practices a working part of your safety program. All accidents can be avoided.

- It is the conveyor owner, operator, and maintenance personnel's responsibility to read and understand ALL safety instructions, safety decals, and manuals and follow them when operating, or maintaining the equipment.

- Owners must give instructions and review the information initially and annually with all personnel before allowing them to operate the conveyor. Untrained users/operators expose themselves and bystanders to possible serious injury or death.

- The conveyor is not intended to be used by children.

- Use the conveyor for its intended purposes only.

- Do not modify the conveyor in any way without written permission from the manufacturer. Unauthorized modification may impair the function and/or safety, and could affect the life of the conveyor. Any unauthorized modification will void the warranty.
2.3. Overhead Power Lines

- When operating or moving, keep conveyor away from overhead power lines and devices.
- The conveyor is not insulated.
- Electrocution can occur without direct contact.

2.4. Moving Conveyor Belt Safety

- DO NOT step on or touch moving conveyor belt.
- Shut off and lock out power to adjust, service, or clean.

2.5. Upending

- Anchor intake end and/or support discharge end to prevent upending.
- Intake end must always have downward weight. Do not release until attached to tow bar or resting on ground.
- Do not raise intake end above tow bar height.
- Empty the conveyor and fully lower before moving.

2.6. Rotating Parts Safety

- Keep body, hair, and clothing away from rotating pulleys, belts, chains, and sprockets.
- Do not operate with any guard removed or modified. Keep guards in good working order.
- Shut off and remove key or lock out power source before inspecting or servicing machine.

2.7. Work Area Safety

- Have another trained person nearby who can shut down the conveyor in case of accident.
- The work area should be kept clear of bystanders.
- Keep the work area clean and free of debris.
2.8. Guards Safety

**WARNING**

- Keep guards in place and do not operate unless all guards are in place.
- Do not walk on, step on, or damage guards.
- Lock out power before removing a guard.
- Ensure all guards are replaced after performing maintenance.
2.9. Raising and Lowering the Conveyor

- Before raising/lowering/moving/adjusting the conveyor, make sure the area around the conveyor is clear of obstructions and/or untrained personnel. Never allow anyone to stand on or beneath the conveyor when it is being placed.
- Lower the conveyor to its lowest position when not in use.
- Empty the conveyor before raising or lowering.
- Do not get on or beneath the conveyor when raising or lowering.
- Raise and lower conveyor on reasonably level ground only.
- Never attempt to increase height of the tube by positioning wheels on lumber, blocks, or by any other means. To do so will result in damage to conveyor and/or serious injury.
- Do not raise the conveyor in high winds.

2.10. Hydraulic Winch Safety

- Keep away from rotating cable drum and winch cable. Do not touch or grab cable while winch is being operated or use hands to guide the cable. Failure to heed could result in serious injury.
- Inspect cable and cable clamps before installing and using hydraulic winch. Replace cable if frayed or damaged. Tighten cable clamps if necessary.
- Do not continue to supply power to hydraulic winch after the conveyor has reached full up position.
- Do not disconnect hydraulic quick couplers when lines are pressurized.
- Make sure lift cable is seated in cable pulley.
- Always keep a minimum of 3 cable wraps on the cable drum.

2.11. Positioning the Conveyor

- Transport and place equipment on reasonably level ground when raising, lowering, positioning, or operating.
- Move the conveyor into position slowly. Do not unhitch and attempt to move by hand.
- Chock wheels and anchor intake end after placement.

2.12. Towing the Conveyor

The conveyor is not intended for transport on public roads. If it requires transport on a public roadway, the following steps should be taken:
2.13. Drives and Lockout Safety

Inspect the power source(s) before using and know how to shut down in an emergency. Whenever you service or adjust your equipment, make sure you shut down the power source and unplug or remove the key (as applicable) to prevent inadvertent start-up and hazardous energy release. Know the procedure(s) that applies to your equipment from the following power source(s). Ensure that all personnel are clear before turning on power to equipment.

2.13.1 PTO Driveline Safety

**Drive**

- Keep body, hair, and clothing away from rotating PTO driveline.
- Make certain the driveline shields telescope and rotate freely on driveline before attaching.
- Make certain the driveline is securely attached at both ends.
- Do not operate conveyor unless all driveline, tractor, and equipment shields are in place and in good working order.
- Do not exceed the specified operating speed.
- Keep universal joint angles small and equal. Do not exceed maximum recommended length for PTO driveline.
- Engage tractor park brake and/or chock wheels.

**Lockout**

- Position all controls in neutral, shut off tractor’s engine, and remove key from tractor.
- If removing key is impossible, remove PTO driveline from tractor.
2.13.2 Hydraulic Power Safety

**WARNING**

**Power Source**

- Refer to the rules and regulations applicable to the power source operating your hydraulic drive.
- Do not connect or disconnect hydraulic lines while system is under pressure.
- Keep all hydraulic lines away from moving parts and pinch points.
- Escaping hydraulic fluid under pressure will cause serious injury if it penetrates the skin surface (serious infection or toxic reaction can develop). See a doctor immediately if injured.
- Use metal or wood as a backstop when searching for hydraulic leaks and wear proper hand and eye protection.
- Check all hydraulic components are tight and in good condition. Replace any worn, cut, abraded, flattened, or crimped hoses.
- Clean the connections before connecting to equipment.
- Do not attempt any makeshift repairs to the hydraulic fittings or hoses with tape, clamps, or adhesive. The hydraulic system operates under extremely high pressure; such repairs will fail suddenly and create a hazardous and unsafe condition.

**Lockout**

- Always place all hydraulic controls in neutral and relieve system pressure before disconnecting or working on hydraulic system.
2.14. Tire Safety

**WARNING** Failure to follow proper procedures when mounting a tire on a wheel or rim can produce an explosion that may result in serious injury or death.

- **DO NOT** attempt to mount a tire unless you have the proper equipment and experience to do the job.
- Have a qualified tire dealer or repair service perform required tire maintenance.
- When replacing worn tires, make sure they meet the original tire specifications. Never undersize the replacement tire.
- **DO NOT** weld to the tire rim with the tire mounted on the rim. This action may cause an explosion which could result in serious injury or death.
- Inflating tires to the manufacturer’s recommended pressure.
- Tires should not be operated at speeds higher than their rated speed.
- Keep wheel lug nuts tightened to manufacturer’s recommendations.
- Never reinflate a tire that has been run flat or seriously under-inflated without removing the tire from the wheel. Have the tire and wheel closely inspected for damage before remounting.

2.15. Personal Protective Equipment

The following Personal Protective Equipment (PPE) should be worn when operating or maintaining the equipment.

**Safety Glasses**

- Wear safety glasses at all times to protect eyes from debris.

**Coveralls**

- Wear coveralls to protect skin.

**Hard Hat**

- Wear a hard hat to help protect your head.
Steel-Toe Boots
- Wear steel-toe boots to protect feet from falling debris.

Work Gloves
- Wear work gloves to protect your hands from sharp and rough edges.

Dust Mask
- Wear a dust mask to prevent breathing potentially harmful dust.

2.16. Safety Equipment

The following safety equipment should be kept on site:

Fire Extinguisher
- Provide a fire extinguisher for use in case of an accident. Store in a highly visible and accessible place.

First-Aid Kit
- Have a properly-stocked first-aid kit available for use should the need arise, and know how to use it.

2.17. Safety Decals

- Keep safety decals clean and legible at all times.
- Replace safety decals that are missing or have become illegible. See decal location figures that follow.
- Replaced parts must display the same decal(s) as the original part.
- Replacement safety decals are available free of charge from your distributor, dealer, or factory as applicable.

2.17.1 Decal Installation/Replacement

1. Decal area must be clean and dry, with a temperature above 50°F (10°C).
2. Decide on the exact position before you remove the backing paper.
3. Align the decal over the specified area and carefully press the small portion with the exposed sticky backing in place.
4. Slowly peel back the remaining paper and carefully smooth the remaining portion of the decal in place.
5. Small air pockets can be pierced with a pin and smoothed out using the sign backing paper.
2.17.2 Safety Decal Locations and Details

Replicas of the safety decals that are attached to the conveyor and their messages are shown in the figure(s) that follow. Safe operation and use of the conveyor requires that you familiarize yourself with the various safety decals and the areas or particular functions that the decals apply to, as well as the safety precautions that must be taken to avoid serious injury, death, or damage.

To prevent serious injury or death:

- Read and understand the manual before assembling, operating, or maintaining the equipment.
- Only trained personnel may assemble, operate, or maintain the equipment.
- Children and untrained personnel must be kept outside of the work area.
- Do not modify the equipment. Keep in good working order.
- If the manual, guards, or decals are missing or damaged, contact factory or dealer for replacements.
- Lock out power before performing maintenance.
- To prevent equipment collapse, support equipment tube while disassembling certain components.
- Electric motors must be grounded. Disconnect power before resetting overloads.

**OPEN BELT CONVEYOR**

To prevent death or serious injury:
- DO NOT step on or touch moving conveyor belt.
- Shut off and lock out power to adjust, service, or clean.

| P1513036    | ![Image of warning sign](image2.png) |

**HIGH PRESSURE FLUID HAZARD**

Hydraulic fluid can cause serious injury if it penetrates the skin. If it does, see a doctor immediately.
- Relieve system pressure before repairing, adjusting or disconnecting.
- Wear proper hand and eye protection when searching for leaks. Use wood or cardboard instead of hands.

| P1513038    | ![Image of warning sign](image3.png) |

To prevent death or serious injury:
- Keep away from rotating cable drum and winch cable.
- Inspect lift cable periodically; replace if damaged.
- Inspect cable clamps periodically; tighten if necessary.

</tbody>
</table>

![Notice Diagram](image)

To prevent belt damage, use correct belt tension and do not attempt to adjust belt tracking with the take-up roller.

To set correct belt tension:
- While conveyor is running empty, tighten nut against the pretensioner (take-up pipe) so that the edge of the indicator pipe is within the green area.
- Ensure take-up roller is tensioned equally by using a tape to measure distance "X".
- After the conveyor belt has been tensioned, check the alignment of all other s-drive rollers and periodically afterward.

See manual for complete instructions.

<tbody>
<tr>
<td>P1513032</td>
<td>NOTICE</td>
</tr>
</tbody>
</table>

![Notice Diagram](image)

To prevent damage, tighten/snug bolts as shown when assembling or maintaining the conveyor.

**NOTE:**
- Leave these bolts snug until belt has been aligned then they may be tightened down.
- Leave these bolts snug so gearbox mount can float.
3. Features

This section covers the main features of the conveyor.

3.1. Model Number

XXXX SA

- Swing Away
- Approximate Tube Length (feet)
- Belt Width (inches)
4. Transport

Before continuing, ensure you have completely read and understood this manual’s Safety section, in addition to the safety information in the section(s) below.

4.1. Transport Safety

- Check with local authorities regarding transport on public roads. Obey all applicable laws and regulations.
- Always travel at a safe speed, never exceeding 20 mph (32 km/h). Reduce speed on rough surfaces. Use caution when turning corners or meeting traffic.
- Yield to other drivers and allow faster traffic to pass.
- Make sure the SMV (slow moving vehicle) emblem and all the lights and reflectors that are required by local authorities are in place, are clean, and can be seen by all over-taking and oncoming traffic. Always use hazard-warning flashers on tractor/towing vehicle when transporting unless prohibited by law.
- Do not transport during times of limited visibility such as fog, snow, or heavy rain. Take extra precautions at night and at dusk.
- Keep others away from the transport vehicle and conveyor.
- Do not allow riders on the conveyor or towing vehicle during transport.
- Stay away from overhead obstructions and power lines when operating and transporting. Electrocution can occur without direct contact.
- Fully lower the conveyor before transporting, and only raise when next to storage facility.
- Attach to a proper towing vehicle with a pin and retainer. Always attach safety chain(s).
- Do not raise the intake end above drawbar, upending may occur.
- Empty conveyor of all grain before transporting. Transporting a full conveyor will place excessive loads on the tube, frame, axle, hitch, and tow vehicle.
- Do not transport on slopes greater than 20°.
- Do not transport with an under-inflated tire(s).
- If the conveyor wheels are partially or fully buried in snow or grain, failure to clear area around the wheels before transporting may cause damage to the conveyor or result in serious injury.

4.2. Transport Preparation

1. It is not recommended that the conveyor be transported faster than 20 mph (32 km/h). Table 4 references the acceptable transport speed as per the ratio of tractor weight versus conveyor weight. See Specifications for conveyor weights.

A WARNING A weight imbalance between the and the towing vehicle could result in a collision from reduced stability, handling, and braking ability.

2. Ensure the conveyor will clear any overhead obstructions or electrical wires prior to transporting. Refer to Specifications for the transport height of your conveyor.
3. Longer conveyors have a large turning radius. Allow ample room for turning as the discharge end may swing dramatically. Allow all oncoming traffic to pass before turning right or left.

**WARNING** A collision with an oncoming vehicle could occur if the conveyor discharge swings into the opposing lane.

4.3. Connect the Conveyor to the Towing Vehicle

This section provides an overview of how to connect the conveyor to the towing vehicle. For specific information on the components, refer to the applicable section.

Follow all safety precautions when transporting the conveyor and use a proper towing vehicle.

1. Fully lower the conveyor; there should be slight tension on the lift cable.
2. Connect the conveyor to the two vehicle with a hitch pin. Use a hitch pin that will not allow the conveyor to separate from the towing vehicle.
3. Connect the safety chain securely, forming a cradle to prevent the conveyor from digging into the road surface (should a breakaway occur). Do not use the safety chain if one or more links or end fittings are stretched, broken, damaged, or deformed.

**Important**

The safety chain should have a load rating at least as high as the conveyor weight.

4. Use caution when transporting the conveyor over rolling terrain. In severe dips, the intake end may contact the ground.

Refer to Section 9. – Specifications on page 69 for conveyor weight and hitch pin information.
5. Placement

Before continuing, ensure you have completely read and understood this manual’s Safety section, in addition to the safety information in the section(s) below.

5.1. Placement Safety

⚠️ WARNING
- The conveyor is not insulated, keep away from overhead power lines. Electrocution can occur without direct contact.
- Anchor intake end before using.
- Place the conveyor on reasonably level ground before operating. The conveyor could topple if ground is too uneven.
- Chock the conveyor wheels after placement.
- Empty the conveyor before raising, lowering, or positioning.
- Check that wheels are free to move before raising or lowering the conveyor.
- Never attempt to increase height of the conveyor by positioning wheels on lumber, blocks, or by any other means.
- Do not permit anyone to stand beneath the conveyor when raising or lowering.
- Move the conveyor into position slowly. Do not unhitch and attempt to move by hand.
- Do not leave tube in raised position when not in use.

5.2. Positioning the Conveyor

Filling Bins
The conveyor is designed to be transported and operated without unhitching unit from tractor.

1. Disconnect the PTO driveline from the tractor and secure it in the transport saddle.
   Notice: Failure to disconnect from the tractor will damage the PTO driveline.

2. Ensure that the tractor and conveyor are securely hitched together.
   Important: Use a type of hitch pin (see Conveyor / Tractor Hookup section) that will not allow the conveyor to separate from towing vehicle.

3. Disconnect the safety chain from the intake hopper.

4. Before connecting the hydraulics, ensure that the quick-connect coupler on the conveyor and tractor is clean and free of dirt by wiping with a cloth.
   ⚠️ WARNING: Dirt in the hydraulic system can damage the cylinder o-rings, causing leakage and the possible failure of the system and personal injury.

5. Connect hydraulic hoses, ensure connections are tight. Check for leaks, binding, flattening, kinks, or wear.

7. Adjust the hitch to the operating position, refer to Hitch Adjustment.
8. Move the jack into storage position.
9. Raise the main conveyor tube as required, see Raising and Lowering.
10. Move the conveyor into working position slowly. Do not unhitch and attempt to move the conveyor by hand.
11. Back the conveyor up to the storage facility while it is in its lowered configuration.
12. Raise the conveyor so it clears the storage facility.
13. Slowly back the conveyor up until the outlet is over the opening in the storage facility.
14. Slowly lower the conveyor to the bin.
15. Set the park brake on the tractor before dismounting, or chock its wheels.
16. Once the conveyor is in position, chock its wheels.
17. Lower the intake hopper to the ground, see Raising and Lowering the Intake Hopper.
18. See Operation for correct operating procedures.
5.2.1 Raising and Lowering

The intake hopper must be off the ground when raising and lowering the conveyor.

**Before using the hydraulic lift cylinder:**
- The hydraulic cylinders are shipped without oil and must be charged with oil before operating the first time. See the Appendix section for charging instructions.
- Check that the hydraulic hoses are free from leaks, binding, flattening, kinks, or wear.
Raising
1. Before connecting the hydraulic hose, wipe the hose coupler clean.

   **NOTICE** Dirt in the hydraulic system can damage the cylinder o-rings and can cause leakage and failure of the system.

2. Connect the hydraulic hoses, ensure the connections are tight. Visually check for leaks, binding, flattening, kinks, or wear.
3. Open the ball valve on the hose connected to the cylinder.
4. Start tractor and idle at low rpm.
5. Engage hydraulic lever to power the cylinder.
6. Increase tractor rpm until desired rate of lift is reached.
7. Raise the conveyor to the desired height.
8. Close the hydraulic ball valve when the conveyor is fully raised.

   **NOTICE** Failure to close the ball valve will cause the frame to lower, damaging the conveyor.

Lowering:
1. Reconnect the hydraulic hose coupler to tractor, if disconnected. Keep the tractor running while lowering the conveyor should the need arise to re-lift it.

   **NOTICE** Some conveyors are equipped with dual acting hydraulic cylinders, for these units the tractor must be running to pump oil oil to the upper chamber of the hydraulic cylinder(s) to prevent overfilling of the tractor reservoir.

2. Open the ball valve.
3. Open the tractor valve, feathering the control to prevent too rapid a descent.

   **Note** Once the valves are opened, the conveyor tube lowers by gravity. As the tube nears the full down position, the rate of descent will increase. Do not operate with the tractor valve fully open.

4. Turn off the tractor, and lock out the tractor power source.
5. Before disconnecting hydraulic couplers, relieve the hydraulic pressure.

   **WARNING** Disconnecting a hydraulic hose under pressure can result in serious injury.

### 5.3. Extendable Axle Positioning

When equipped with extendable axles:

**Important**
Do not raise the conveyor unless the axles are in the extended position. Do not transport the conveyor unless the axles are in the retracted position.

**WARNING** Rollover can occur if axles are not extended before raising the conveyor.

1. Ensure the conveyor is on level ground before attempting to extend or retract the axles. The conveyor must be attached to tractor at all times.
2. Using the jack supplied, insert it into one of the jack stubs located on one end of the axle. Jack must be secured to jack stub using pin (attached to jack).

3. Raise one side at a time. Raise until the tire clears the ground.

4. Remove the axle pin from the axle and position the axle as desired until the holes line up. Reinsert the axle pin and secure with hairpin. Lower the jack.

5. Repeat the process on the opposite side of the axle.

**Figure 10. Typical Extendable Axle**

---

### 5.4. Raising and Lowering

When equipped with a Hydraulic Lift Cylinder:

The intake hopper must be off the ground when raising and lowering the conveyor.

**Before using the hydraulic lift cylinder:**

- The hydraulic cylinders are shipped without oil and must be charged with oil before operating the first time. See the Appendix section for charging instructions.

- Check that the hydraulic hoses are free from leaks, binding, flattening, kinks, or wear.

**Raising**

1. Before connecting the hydraulic hose, wipe the hose coupler clean.

   **NOTICE** Dirt in the hydraulic system can damage the cylinder o-rings and can cause leakage and failure of the system.

2. Connect the hydraulic hoses, ensure the connections are tight. Visually check for leaks, binding, flattening, kinks, or wear.

3. Open the ball valve on the hose connected to the cylinder.

4. Start tractor and idle at low rpm.

5. Engage hydraulic lever to power the cylinder.

6. Increase tractor rpm until desired rate of lift is reached.

7. Raise the conveyor to the desired height.

8. Close the hydraulic ball valve when the conveyor is fully raised.
Failure to close the ball valve will cause the frame to lower, damaging the conveyor.

**Lowering:**

1. Reconnect the hydraulic hose coupler to tractor, if disconnected. Keep the tractor running while lowering the conveyor should the need arise to re-lift it.

**Notice**

Some conveyors are equipped with dual acting hydraulic cylinders, for these units the tractor must be running to pump oil oil to the upper chamber of the hydraulic cylinder(s) to prevent overfilling of the tractor reservoir.

2. Open the ball valve.

3. Open the tractor valve, feathering the control to prevent too rapid a descent.

   **Note**
   
   Once the valves are opened, the conveyor tube lowers by gravity. As the tube nears the full down position, the rate of descent will increase. Do not operate with the tractor valve fully open.

4. Turn off the tractor, and lock out the tractor power source.

5. Before disconnecting hydraulic couplers, relieve the hydraulic pressure.

   **Warning**
   
   Disconnecting a hydraulic hose under pressure can result in serious injury.

6. Adjust the conveyor in the full down position until there is a slight tension on the lift cable. Do not leave the cable slack.

### 5.5. Hitch Adjustment

Before operating the conveyor, confirm that dimensions A, B, and C, are within the limits stated in Figure 11 when the PTO is connected to the tractor.

This does not apply to the 2000 Series Swing Away Conveyor.

**Note**

The dimensions in Figure 11 are based on the adjustable hitch being in position 2.
If dimension C is greater than the hitch adjustment tolerance

The PTO driveline will separate causing potential damage to equipment and/or operators.

1. With the conveyor completely lowered, adjust the hitch to position 1.
2. If dimension C is still too large, move the draw bar closer to the tractor until dimensions A and C are within the bounds given.

If dimension C is less than the hitch adjustment tolerance

The PTO driveline will bottom out causing potential damage to equipment and/or operators.

1. With the conveyor completely lowered, adjust the hitch to position 3.
2. If dimension C is still too small, move the draw bar further from the tractor until dimensions A and C are within the bounds given.

If dimension B is greater than the hitch adjustment tolerance

The PTO driveline will shorten at a higher rate as the conveyor is raised causing the PTO to bottom out, which will damage the equipment. The angle between the u-joints in the driveline will also become too large and damage may occur.

1. Raise the level of the drawbar such that dimension B is within the given parameters.

5.6. Extended Swing Arm

The swing-away conveyor is equipped with an extendable swing transport arm. The purpose of this arm is to move the transfer in for transporting. With the arm extended, the transfer can be dropped to the ground without interference at any conveyor elevation. To adjust the transport arm for use on the road:

- Disconnect the safety catch.
- Lower the transfer to ground.
- Remove the pin from the extendable arm and slide the pin into transport position.
• Lift the transfer using winch and connect the transport safety catch.

**WARNING** Never transport conveyor on roads with transfer attached to swing arm in the extended position. The extendable swing should be in the extended position for off-road use only.

**Figure 12. Extended Swing Arm**

---

**5.7. Raising and Lowering the Intake Hopper**

1. Position the swing-away transfer under the transport arm.
2. Loosen the lift cable and connect it to the transfer hopper. Lift the swing-away transfer into the transport position using the hydraulic winch lift.

**Figure 13. Swing Away Transfer Lift Winch**

3. Connect the swing catch.
4. Attach the winch cable hook to the appropriate hopper lifting point.
5. Reverse the procedure to lower the swing-away transfer.
5.8. Hydraulic Power Swing Operation

The Hydraulic Power Swing is an optional component for some conveyor models.

1. Connect the hydraulic hoses to the power source.
2. Use the valve handle to move the Swing Away Transfer to the desired position.

Note
When adjusting the power swing, it is normal to hear high pitched sounds depending on the power source. This sound is caused by a safety device which restricts hydraulic oil flow and prevents the power swing from moving too quickly.
5.9. Electric Power Swing Operation

The Electric Power Swing is an optional component for some conveyor models.

Remote transmitters are pre-programmed from the factory — to reprogram your remote (or to add additional remotes), please see the Appendix.

You can register more than one remote transmitter to a single Power Swing. However, it is not recommended to register one remote transmitter to multiple Power Swings.
1. Connect the positive wire directly to the positive terminal on the tractor battery and the negative wire to the tractor chassis (see Figure 17). The negative terminal on the tractor battery should also be grounded to the chassis. There are 5/16” lugged terminals supplied with the kit.

**Figure 17. Electrical Cables**

![Electrical Cables Diagram]

**NOTICE** If these electrical cables are not hooked up properly the electric controller will be damaged.

**Important**

If the Electric Power Swing will need to be moved from one tractor to another on a regular basis, 200 Amp booster-style cable clamps can be installed at the owner’s own risk and expense.

2. On the high end of the Power Swing remote receiver box, flip the power switch (Figure 18) to the ON position.

**Table 5. Power Swing Receiver Box**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>

</thead>
<tbody>
<tr>
<td>1</td>
<td>Receiver Box</td>
</tr>
<tr>
<td>2</td>
<td>Power Switch</td>
</tr>
<tr>
<td>3</td>
<td>Direction switch</td>
</tr>
</tbody>
</table>
For Receiver Box Operation:
1. Using the direction switch, move the switch in the desired direction of travel (either F1 or F2).
2. Once finished moving the hopper, release the switch to stop operation (it should return to the neutral position).

For Remote Transmitter Operation:
1. Push the green button (no symbol) to turn the remote ON (Figure 16).
2. Push the yellow directional buttons (marked with arrows) located below the ON/OFF buttons in the direction you want the hopper to move (Figure 16).
3. If this does not work:
   a. Push the red button (with an exclamation mark) to turn the remote OFF.
   b. Then push the green button (no symbol) to turn the remote back ON.
4. Operate the remote as outlined above, using the two yellow directional buttons (marked with arrows) located at the bottom of the remote to move the hopper as desired.

5.10. Collapsible Hopper Cloth Control

The conveyor is designed with a collapsible hopper cloth to allow it to go under low discharge units. Move the control handle toward the hopper or intake to raise the hopper cloth, and move the handle toward the outlet or spout end to collapse the hopper cloth, see Figure 19 on page 42.
5.11. Conveyor Operating Angles

The conveyor lift can set the tube angle up to 30° when operating. Because the belt does not have roll back barriers, the material will roll back if the angle is too steep. Do not position the conveyor at an angle steeper than the grain will roll back (angle of repose) of the material to be moved.

**Note**

The lower the angle, the greater the capacity of the conveyor.

The following table indicates the maximum angle a conveyor can move grain.

To roughly determine conveyor angle, use angle guide on right. Stand the manual (vertically) on conveyor tube and hold a string with a weight attached to end against the top of this page. Weighted end of string will fall between degree lines, and from this the approximate angle of the conveyor can be determined.

6. Operation

Before continuing, ensure you have completely read and understood this manual’s Safety section, in addition to the safety information in the section(s) below.

6.1. Operation Safety

WARNING • Keep away from rotating and moving parts, including the conveyor belt, drive components, shafts, and bearings.
• Do not enter the grain bin while the conveyor is operating.
• Always operate with guards, covers, and shields in place.
• Have another trained person nearby who can shut down the equipment in case of accident.
• Keep the work area clear of bystanders.
• Keep the work area clean and free of debris.
• Ensure maintenance has been performed and is up to date.

Refer to your bin operation manual for specific operating and safety information for your bin.

6.2. Start-up and Break-in

Although there are no operational restrictions on the conveyor when used for the first time, it is recommended that the following items be checked during the first hours of operation.

1. Check that the conveyor intake and discharge areas are free of obstructions.
2. Check conveyor belt alignment to ensure preset alignment does not vary under loaded conditions. See Maintenance Section for alignment instructions.
3. Check the conveyor belt tension. See Maintenance Section for tension instructions.
4. Check the pinch roller bearings on the s-drive pinch roller are not tight.
5. Visually inspect the conveyor, see Visual Inspection in Maintenance Section.
6. Check tightness of all bolts/nuts, fasteners, and hardware (re-torque if necessary).
7. Ensure adequate power is supplied to operate the conveyor, see Section 9. – Specifications on page 69.
8. Start the tractor and idle at low rpm. Slowly engage the PTO drive. Refer to PTO Drive Operation.
9. Start the hydraulic drive on the Swing Away transfer conveyor. Refer to Hydraulic Drive Operation.
10. Gradually begin feeding grain into the hopper, bringing the tractor PTO drive to roughly half speed. Do not overfeed the hopper on initial loads; keep the feed of grain at about half capacity.
11. Be aware of unusual sounds. If any are heard, determine the source and stop the conveyor. Lock out and correct the problem before resuming work. If you are unsure of the problem or procedure, contact your local dealer.
12. After the conveyor runs fairly smoothly, proceed to unload at the specified full PTO speed. Do not exceed the specified full PTO speed (see Section 9. – Specifications on page 69).
13. Do not run the conveyor for long periods of time without material on the conveyor belt because it increases wear. Try to run only when moving material.

14. Stop the conveyor when it is empty of grain and lockout power, lower fully.

**Important**

After the initial start-up and inspection, the conveyor should be shut down and visually inspected (see Maintenance Section) after approximately ten hours of operation.

### 6.3. Operation - Swing Away Transfer Hydraulic Motor Drive

1. Set the hydraulic valve so that is open as shown in Figure 21 on page 46.
2. Place all tractor controls in neutral.
3. Start the tractor and run at low idle.
4. Engage the tractor hydraulic control lever and increase the engine to desired speed.

**Note**

The correct operation of a hydraulic system is directly linked to the pump’s ability to supply the correct oil flow and pressure. If you cannot obtain the correct belt speed, check with the dealer to ensure the power unit is delivering the correct oil volume and pressure.

5. Run until the belting is empty.
6. Reduce tractor engine speed to low idle.
7. Place hydraulic control lever in neutral.
8. Shut off engine and remove ignition key.
9. Set the hydraulic valve so that it is closed.

**Hydraulic Valve**

The hydraulic valve can be set to control the flow of oil to the hydraulic motor. This valve should normally be set fully open to operate or fully closed when not operating. The valve handle can be used to set partial speeds, however this is not recommended for extended periods.

**Figure 21. Hydraulic Drive Valve**

![Hydraulic Drive Valve](image)
6.4. Operation - PTO Drive

1. Attach the PTO driveline securely to the tractor and confirm the connection to the conveyor shaft is secure.
2. Confirm the PTO driveline rotating shield and other shields/guards are in place and in good working order.
3. Align the tractor axis with the conveyor input shaft to minimize the angles of the universal joints on the PTO driveline.

   **Important**
   Check that the PTO does not exceed the maximum operating angle, refer to Section 9. – Specifications on page 69.

4. Confirm that the conveyor-to-tractor PTO hookup distances are set as required.
5. Ensure the PTO drive on the tractor is in the off position before starting the tractor.
6. Start tractor engine at low idle, slowly engage the PTO with the tractor idling to prevent unneeded stress on the drive components and shear bolts.
7. If everything is operating normally, start running grain through the conveyor and increase the tractor PTO to the specified full speed to produce the required flow.
8. To shut down, reduce the speed to low idle and lock out the PTO.
9. Disconnect the PTO driveline from the tractor and secure it to the PTO transport saddle with the safety chain and keep it in transport saddle when transporting.

**When raising or lowering the conveyor:**
Disconnect the PTO driveline.

**When starting under load:**
If restarting the conveyor under load (tube is full), engage the PTO with the tractor idling.

   **NOTICE** Engaging the PTO at high engine speed under load will result in equipment damage.

**Shear Bolts:**
If a shear bolt in the PTO driveline fails, shut down and lock out the tractor to replace the shear bolt. Ensure that the shear point is through the shank of the bolt, not the threads. Refer to Section 9. – Specifications on page 69 for shear bolt sizes.

6.5. Loading Area

To achieve maximum capacity:
- Feed material onto the belt until the material tube clearance is 1/2”.
- Direct the flow of material into the input hopper in the direction of the belt travel for the best capacity.
Do not flood feed the hopper.

6.6. Conveyor Belt Speed

The best results are obtained when the input drives are set to provide a conveyor belt speed of 500 to 600 ft/min on the 1500 series, and 600 to 650 ft/min on the 1800, 2000, and 2400 Series.
Count the number of belt revolutions per minute to determine belt speed. See Specifications for belt length.

**Note**
Use the connector splice as a reference when counting belt revolutions.

To calculate, for example, 600ft/minute belt speed for a 47ft belt:

\[
\frac{\text{BeltSpeed}}{\text{BeltLength}} = \frac{600}{47} = 12.76
\]

Therefore, 12.76 or approximately 13 belt passes per minute will provide a 600ft/min belt speed.

Contact your dealer or the factory for the appropriate drive components to give the recommended belt speed. If the belt speed is too low, conveyor may leak around transition area.

### 6.7. Emergency Shutdown

In an emergency situation:
1. Stop or shut down the power source immediately and lock out all power.
2. Stop the flow of material (if applicable).
3. Ensure the machine components come to a stop before inspecting.
4. Correct the emergency situation before resuming work.

### 6.8. Restarting with a Full Tube

When the conveyor is shut down inadvertently or due to an emergency, the tube may still be filled with grain.

1. With the power source locked out, remove as much of the grain as possible from the tube and intake using a shop vacuum or other tool. Do not use your hands. **NOTICE** Starting under load may result in damage to the conveyor.
2. If guards or covers have been opened or removed, close or replace them before restarting the unit.
3. **Electric and Gas Drive Models:** It may be necessary to tighten the drive belts slightly to handle the heavier than normal loads.
4. **Gas and PTO Drive Models:** Since the start-up torque loads are so much higher than normal when the conveyor belting is full, restart at low speed. Do not let the conveyor belt drive roller spin on the belt if conveying belt does not start moving immediately. This will damage the drive roller and conveying belt.
5. Once the conveyor has been started, you may resume normal operation.

### 6.9. Shutdown

When operation has been completed:
1. Once the conveyor is clear of grain, lock out the power source.
2. Lower the conveyor fully.
3. Clean out any remaining grain from the conveyor with a vacuum or sweep out.
4. Clean the entire work area.
5. Remove anchors, supports, and chocks.

### 6.10. Clean Out

After using your conveyor, follow the clean out steps below to ensure longer belt life and trouble free operation. Failure to clean out the conveyor can cause build up of product on the belt and roller shafts, causing spillage, roller misalignment, and excess wear/damage to the belt.

**WARNING** Failure to lock out power can cause severe injury.

1. Remove any product remaining in the hopper and spout with a vacuum or sweep out.
2. Remove debris from shafts, sheaves, and drive belts (as equipped).
3. Once the conveyor is empty of all product, check for damage on belt and lacing such as notches or cut outs. Any damage on belt may result in product getting under it creating a build-up. If belt replacement and re-lacing is necessary, refer to the Maintenance Section.

   **Important**

   Ensure the conveyor is free from all product and debris to prevent build-up. Any build-up on belt and shaft becomes a source of spillage and can cause belt misalignment with the possibility of belt edges sustaining damage on the fixed structure. Build-up on the hopper and spout will cause the belt to wear faster due to drag.

4. Once cleaned out, cover intake to prevent moisture from collecting in hopper.

### 6.11. Conveying Fertilizer

Fertilizer may be conveyed using the conveyor when strictly operated at a reduced capacity and additional care is taken to thoroughly clean the conveyor after operation.

**Important**

Fertilizer weakens the belt lacing and warranty is void on all lacing used with fertilizer. The belt lacing may need to be replaced more often if you convey fertilizer.

**Additional Operating Requirements**

To prevent problems that can be caused by conveying fertilizer:

1. Do not allow fertilizer to fill over the edge of the belt. This will allow fertilizer to get under the belt and start building up.
2. Reduce the flow if the conveyor belt starts to slip. Denser fertilizers will slow the conveyor belt down due to the weight of the product. Too much material will cause the drive roller to slip and lead to additional wear on the roller.
3. Do not move fertilizer with your conveyor in humid, wet or rainy conditions. This will cause buildup of fertilizer under your conveyor belt.

**Additional Clean-Out Procedures**

Proper cleaning will help to ensure longer belt life and prevent excess rust formation.

1. Run conveyor empty at full speed for 5-10 minutes after conveying fertilizer. This will help ensure that any product that may be under the belt will be cleaned out and prevent build up.
Do not attempt to manually remove build-up while conveyor is running.

2. Next, run the belt at low idle and inspect for damage on the belt and lacing, such as notches or cut outs caused by mice and normal wear. Any damage on the belt may result in fertilizer getting under the belt creating a buildup. Consider replacing the conveyor belt if it is in poor condition. If equipped with an electric motor, inspect on the belt return side with the electric motor not running. Turn on the conveyor to expose the belt that was previously in the tube. Turn off the conveyor and inspect the belt on the belt return, along with the lacing.

3. Shutdown and lockout power to the conveyor and vacuum or sweep out any remaining fertilizer from the hopper.

4. Remove the s-drive bottom cover and remove any buildup from this area and clean cover. Replace the cover when complete.

5. If buildup is evident on or under the belt, remove the buildup to ensure proper operation of the conveyor. When necessary remove fertilizer buildup from under the belt by scraping and washing the belt.

Figure 22. Fertilizer Buildup on Rollers

Figure 23. Fertilizer Buildup at Hopper Transition
6.12. Storage

After the season’s use, the conveyor should be thoroughly inspected and prepared for storage. Repair or replace any worn or damaged components and perform maintenance as described in the Maintenance Section to prevent any unnecessary downtime at the start of the next season.

To ensure a long, trouble-free life, this procedure should be followed when preparing the unit for storage.

1. Remove all residual material from the hopper and the tube.
2. Stop the machine with the belt lacing inside the tube. This helps prevent the lacing from rusting.
3. Wash the entire conveyor thoroughly using a water hose or pressure washer to remove all dirt, mud, debris, or residue.
4. Inspect all moving or rotating parts to see if anything has become entangled in them. Remove any entangled material.
5. Touch up all paint nicks and scratches to prevent rusting.
6. Check tire pressure and inflate. For inflation pressure, refer to Section 9 – Specifications on page 69.
7. Inspect the conveyor for cracks, tightness of fittings and fasteners, hydraulic hose cracks (if applicable). Have required repairs performed to replace worn or damaged components.
8. Store in an area that is dry, level, free of debris, and away from human activity. Store inside if possible.
10. Support intake on blocks to eliminate prolonged contact with the ground.
11. Clean and lightly lubricate the spline on the PTO driveline. Cover the PTO driveline with a plastic bag to protect it from the weather and place it in the transport saddle.
12. Lower the conveyor fully for storage.
13. Place the swing-away hopper in transport position, ensuring there will be adequate drainage of any moisture.
7. Maintenance

Before continuing, ensure you have completely read and understood this manual’s Safety section, in addition to the safety information in the section(s) below.

7.1. Maintenance Safety

• Keep components in good condition. Follow the maintenance procedures.
• Ensure the service area is clean, dry, and has sufficient lighting.
• Do not modify any components without written authorization from the manufacturer. Modification can be dangerous and result in serious injuries.
• Shut down and lock out power before maintaining equipment.
• After maintenance is complete, replace all guards, service doors, and/or covers.
• Use only genuine Hutchinson replacement parts or equivalent. Use of unauthorized parts will void warranty. If in doubt, contact Hutchinson or your local dealer.

**Before attempting maintenance of any kind:**
• Lower the conveyor fully.
• Chock wheels.
• Support tube if performing maintenance on the undercarriage assembly.
• **If equipped with hydraulics:** Before applying pressure to a hydraulic system, make sure all components are tight and that hoses and couplings are in good condition.

7.2. Maintenance Schedule

Proper maintenance habits mean a longer life, better efficiency, and safer operation. Please follow the Maintenance Schedule below. Keep good records of the hours the conveyor has been operated and the maintenance performed.

<table>

<thead>
<tr>
<th>Monthly:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Section 7.8. – Inspect Hydraulic Hoses and Fittings on page 56</strong></td>
<td></td>
</tr>
</tbody>
</table>
### 7.3. Visually Inspect the Equipment

Check the following during a visual inspection:

1. Ensure all guards are in place and in good working order.
2. Examine the conveyor for damage or unusual wear.
3. Check tightness of bolts/nuts, fasteners, and hardware (re-torque if necessary).
4. Be sure all safety decals are in place and are legible.
5. Check that the discharge and intake area are free of obstructions.
6. Inspect all moving or rotating parts to see if anything has become entangled in them. Remove any entangled material.

   **WARNING**  
   Lock out power before inspecting.

7. **When equipped:** Inspect hydraulic hoses and fittings for leaks and wear. Fix or replace where necessary.
8. Check wheel bolts are tight and examine tires for gashes, uneven wear, or loss of air pressure. See Section 9. – Specifications on page 69 for recommended tire pressure.
9. Check all operating, lifting, and transport components. Replace damaged or worn parts before using the conveyor.
10. **PTO Models:** Check the PTO shield & replace if damaged.
11. **If equipped with truss cables:** Inspect the truss cables for proper tension and possible damage such as fraying, kinking, or unwinding.

12. **If equipped with a hand or hydraulic winch:** Inspect winch cable for fraying, kinking, unwinding, or other possible damage.

### 7.4. Lubricate the Equipment

Your equipment can operate at top efficiency only if clean fluids and lubricants are used. Use clean containers to handle all fluids and lubricants. Store them in an area protected from dust, moisture, and other contaminants.

1. Wipe the grease fittings with a clean cloth before greasing to avoid injecting dirt and grit.
2. Use a hand-held grease gun for all greasing.
3. If fittings will not take grease, remove and clean thoroughly.
4. Replace fittings if they are broken or will not accept grease.

Use SAE multi-purpose high-temperature grease with extreme pressure (EP) performance. SAE multi-purpose lithium-based grease is also acceptable.

#### 7.4.1 PTO Driveline

**Figure 24. Typical PTO Driveline Grease Points**

![Figure 24. Typical PTO Driveline Grease Points](image)

**Figure 25. Typical PTO Driveline Grease Points**

![Figure 25. Typical PTO Driveline Grease Points](image)

### 7.5. Oil the Chain Coupler

The chain coupler is located between the hydraulic motor and the conveyor’s drive roller.
7.6. Check the Gearbox Oil

1. Remove fill/vent plug to check gearbox oil level. Insert an improvised dipstick (rolled paper or plastic tie) into the oil filler hole to determine the oil level.
2. Note the level and the condition of the oil. Maintain oil level at half full (center of cross shaft) with 90W or equivalent gear oil, adding as necessary or drain and refill if condition is poor.
3. Ensure gearbox is level when checking or refilling.
4. Do not overfill when adding oil.
5. Replace fill/vent plug.

7.7. Change the Gearbox Oil

Use SAE approved 90W or equivalent gear oil.

1. Remove gearbox from the conveyor.
2. Place a pan under the drain plug.
3. Use a wrench and remove the drain plug.
4. Loosen the filler plug so air can enter the gearbox and the oil will drain freely.
5. Allow the oil to drain completely.
6. Replace the drain plug.
7. Add oil until the gearbox is half full (center of cross shaft) and replace filler plug. A flexible funnel may be required. Gearbox should be level when checking or refilling. Do not overfill.
8. Reinstall the gearbox and guards.
7.8. Inspect Hydraulic Hoses and Fittings

When equipped:

1. Pressurize the system.
2. Using a piece of cardboard or wood, run it along the length of the hose and around all fittings.
   
   **WARNING** Escaping hydraulic fluid under pressure will cause serious injury if it penetrates the skin surface.

3. Replace the hose or tighten/replace the fitting if a leak is found. For replacement hoses, refer to Section 9. – Specifications on page 69.
4. Replace any hose that is badly cut, nicked, abraded, or is separating from the crimped end of the fitting.
5. Secure hoses to the machine.

7.9. Inspect the Hopper Flashing

Check hopper flashing for wear and replace any that are worn. Worn flashing will cause hopper leakage.

7.10. Check the Roller Bearings

Check the roller bearings for wear. Any rollers making noise, getting hot while running, or that give should be replaced.

7.11. Check the Roller Lagging

Inspect roller lagging to see if it is showing signs of wear.

**NOTICE** Operating the conveyor with a damaged roller will result in a damaged conveyor belt.

7.12. Tension the Conveyor Belt

Adjusting your conveyor belt for proper tension helps to ensure trouble-free operation and long belt life.

The conveyor belt only needs to be tight enough to not slip on the drive roller. If the belt is too loose, it will slip on the drive roller making a noticeable sound, slowing the belt down.

The conveyor belt should not be easy to pull from the hopper transition sides, otherwise the belt will require tensioning.

**NOTICE** Failure to stop using the conveyor with a slipping belt will damage it and/or the drive roller lagging. In extreme cases, sections of burnt belt will have to be replaced. This type of damage is not covered by warranty.

To set correct conveyor belt tension:

1. While the conveyor is running empty, fully tighten the nut against the pretensioner (take-up pipe) so that the edge of the indicator pipe is within the green area, see Figure 27 on page 57.
2. Ensure the take-up roller is tensioned equally by using a tape measure to check the distance “X” on both sides.

3. After the conveyor belt has been tensioned, check the alignment of all s-drive rollers, see Section 7.13 – Align the Conveyor Belt on page 58.

4. If the belt is still loose after tensioning, the belt needs to be shortened or replaced (depending on wear).

Figure 27. S-Drive

7.12.1 S-Drive Pinch Roller

The s-drive pinch roller should always be set with its flange nuts wiggle loose, allowing the spring to push against and pinch the conveyor belt. This should not normally require adjustment.

1. Do not tighten nuts. Bearing nuts must remain wiggle loose.
2. Tighten pinch spring, if loose.
3. Confirm that the pinch roller and drive roller are flush.
7.13. Align the Conveyor Belt

**WARNING** Failure to lock out power can cause severe injury.

**Basic Conveyor Belt Alignment:**
The conveyor belt will run straight when all of the rollers are straight.

Loosen or tighten the adjustment bolt(s) to align the conveyor belt. Tighten the side the belt has moved toward, or loosen the side the belt has moved away from.

Before Aligning the Belt:
- The conveyor must be empty of all grain.
- Wait until the belt makes a complete revolution before adjusting the rollers. Some belts may have uneven edges, appearing misaligned.

To Align the Belt:
If your belt is tracking off-center, follow the sections and steps in the order following to center it.
7.13.1 Adjust the Rollers

1. Loosen bearing nuts and jam nuts (if equipped).

2. Rotate adjustment bolt 1/2 turn.

3. Restart conveyor and run empty for 1 minute.

4. Stop the conveyor and remove ignition key or lock out the power source.

5. If the belt has centered, move to next step. If not, repeat Step 2 to Step 4 until the belt is centered.

6. Tighten the bearing bolts and jam nut (if equipped).

7. Replace any guards that were removed.
7.13.2 Adjust the Belt Return Wear Blocks

1. Adjust the wear blocks by rotating them 90 or 180 degrees. If they are worn down, replace the wear blocks.

Figure 33. Belt Return Wear Blocks

2. Replace the guards if removed.

Inspect the condition of the belt lacing, if any clips are worn through, replace all lacing.

7.15. Replace the Belt Lacing

1. Rotate the conveyor belt until the lacing is by the hopper or is easily accessible.
2. Loosen the conveyor belt and remove the lacing retainer clip and pin.
3. Using a square and sharp knife, cut the lacing off right behind the lacing clips. The cut belt MUST have a square end.
4. Use a knife to cut Chevron pattern off 1” back from the end of the belt. This ensures that the lacing is centered and fully seated on the belt.
5. Use a lacing tool to install new lacing clips. Lacing clips are one clip shorter than the belt width. For example: the lacing for a 15” wide belt is 14 clips. Center the lacing on the belt and install the lacing as per instructions on the lacing tool.
6. Reattach the conveyor belt ends together. If required, use a ratchet strap clamped to both ends of the belt to cinch the belting ends together. Figure 34 on page 61.
7. Install the lacing pin and crimp the retainer clips onto each end of the lacing pin. Figure 35 on page 62.
8. Remove the ratchet strap and tighten the conveyor belt (see “Conveyor Belt Tension”).
9. Check and set the belt alignment (see “Conveyor Belt Alignment”).
10. Engage the conveyor drive. Allow the conveyor to run for 30 seconds, then shut down the conveyor and inspect the lacing.
7.16. Replace the Conveyor Belt

1. Rotate the conveyor belt until the lacing is by the hopper or is easily accessible.
2. Move the tension roller to its loosest position.
3. Pull all the slack to the lacing area.
4. Remove the lacing retainer clip and pin.
5. Attach one end of the replacement belt to the belt end being removed, closest to the hopper.
6. Pull the old belt out and the new belt will be threaded into place.
7. Disconnect the old belt.
8. Reattach conveyor belt ends together. If required, use a ratchet strap clamped to both ends of belt to cinch belting ends together. Figure 34 on page 61.

Figure 34. Using the Ratchet Strap

9. Install the lacing pin and crimp the retainer clips onto each end of the lacing pin, see Figure 35.
10. Remove the ratchet strap and tighten the conveyor belt (see “Tension the Conveyor Belt”).
11. Check and set the belt alignment (see “Align the Conveyor Belt”).
12. Engage the conveyor drive. Allow it to run for 30 seconds, then shut down the conveyor and inspect the lacing.
7. MAINTENANCE

7.17. Clean and Wash the Equipment

1. Clean out excess grain from all areas of the conveyor.
2. Make sure water can drain from the conveyor tube and intake, then wash the tube with a water hose or pressure washer until all dirt, mud, debris, or residue is gone.
3. Provide sufficient time for the water to drain from the conveyor.

7.18. Repack the Wheel Bearings with Grease

1. Block wheels and ensure unit is stable.
2. Remove the wheel bolts and the wheels.
3. Clean wheel and hub mounting surfaces to ensure there is no rust or debris.
4. Remove the wheel bearing and pack with grease. Use SAE multi-purpose high-temperature grease with extreme pressure (EP) performance. SAE multi-purpose lithium-based grease is also acceptable.
5. Tighten the wheel bolts (diagonal pattern) with a torque wrench to 100 ft-lb (±10 ft-lb) of torque. Inspect to make sure the wheel is sitting flush with the hub.
7.19. Check/Adjust the Truss Cables

When equipped with Truss Cables:

Check the Truss Cables:
Check tube for straightness, no slack in the cables, and a just noticeable upward deflection of the discharge end. During operation, it is normal that for the tube to deflect downward.

If required, adjust cables by following the procedure below:

1. Lift the discharge end of the conveyor with a overhead crane, front end loader, or other proper lifting device so that the tube has a slight upward deflection at the discharge to give the cable some slack.

⚠️ CAUTION The lifting device must be capable of supporting approximately half of the weight of the conveyor as provided in the Specifications section.

2. When the conveyor has more than one set of cables start from the innermost cables and work your way out.

3. Loosen cable clamps on cable truss where the cable requires adjustment.

4. Locate the eyebolt anchors for the cable. Refer to Figure 37 on page 64.

5. Tighten cable eyebolts evenly on both sides (use eyebolt nuts to tighten eyebolts) until the discharge end just starts to angle upward.
   - The tube should not deflect to the left or right if tightened evenly.
   - Tension should be greater on shorter cables than on longer cables. If the conveyor tubes remain straight then the cables are tensioned properly.

6. If the proper cable tension can’t be obtained before the eyebolts run out of adjustment, then do the following:
   a. Loosen the eyebolts.
   b. At the eyebolts, loosen the cable clamps, shorten the cables until there is tension on the cable, then tighten the cable clamps fully.
   c. Return to step 5.

7. Secure jam nut on cable eyebolt and re-tighten any cable clamps that were loosened.

8. The cables are properly tightened when:
   - There is no slack in the cables.
   - The discharge end is deflected slightly upwards.
   - The tube is straight side-to-side.

7.20. Inspect and Service the Hydraulic Winch and Lift Cable

**WARNING**  Place the conveyor in the fully lowered position with the cable slack.

To Inspect the Lift Cable:
1. Inspect the cable for damage such as fraying, kinking, or unwinding. Replace if damaged (see below).
2. Check to make sure the cable clamps are secure.
3. Oil the cable pulleys as needed.
4. Keep a film of grease on the gears. Occasionally oil the bushings, drum shaft, and ratchet.
To Replace the Lift Cable:
1. Unwind the winch drum until the cable is slack and remove the cable clamps.
2. Free the cable from the winch and pulleys.
3. Remove the cable clamps that secure the hook in place.
4. Reverse the above steps to install the new cable.
8. Troubleshooting

Shut down and lock out all power sources before diagnosing any of the causes or attempting any of the solutions below.

In the following section, we have listed some causes and solutions to some of the problems you may encounter.

If you encounter a problem that is difficult to solve, even after having read through this section, please contact your local dealer or distributor. Before you contact them, please have this operation manual and the serial number from your machine ready.

10. Appendix

10.1. Power Swing Remote Transmitter Instructions

Figure 38 shows the controls and indicators for the power swing remote and receiver.

**Important**

The transmitter LED blinks on and off when the transmitter and receiver are active (turned on by the transmitter) and no other button is pressed. The LED turns fully on while a transmitter button is pressed, unless the transmitter battery is low, in which case the LED pulses on and off.
The transmitter automatically transmits a **STOP** signal after 30 minutes; this de-activates the receiver and the transmitter keypad.

The remote transmitter that comes with each power swing is normally factory programmed to function with the power swing receiver. Refer to specific instructions for programming additional or replacement remotes according to the serial number of the power swing receiver.

## 10.2. Programming Receivers

Turn on all the remote transmitters before programming.

**Note**
To de-register all remote transmitters from the receiver, hold down the OFF button on a remote for at least 60 seconds.

**TO REGISTER THE FIRST REMOTE TRANSMITTER:**

1. Switch OFF the receiver.
   
   **Important**
   Steps 2 and 3 must be done within 10 seconds of each other. The FAULT LED on the receiver flashes for the duration of the registration window.

2. Switch ON the receiver.

3. On the first remote, press the ON button and the yellow Down-Arrow Motion button at the same time and hold until the red light on the receiver SET LED illuminates solid red. Release buttons. The remote is programmed, and should be set aside.

**TO REGISTER A SECOND REMOTE TRANSMITTER:**

1. Switch OFF the receiver.
   
   **Important**
   Steps 2 and 3 must be done within 10 seconds of each other. The FAULT LED on the receiver flashes for the duration of the registration window.

2. Switch ON the receiver.

3. On a 2nd remote, press and release the ON button once, then press the ON button and the Down-Arrow Motion button at the same time and hold until the red light on the receiver SET LED illuminates solid red. Release buttons. The remote is programmed, and should be set aside.

**TO REGISTER A THIRD REMOTE TRANSMITTER:**

1. Switch OFF the receiver.
   
   **Important**
   Steps 2 and 3 must be done within 10 seconds of each other. The FAULT LED on the receiver flashes for the duration of the registration window.

2. Switch ON the receiver.

3. On a 3rd remote, press and release the ON button twice, then press the ON button and the Down-Arrow Motion button at the same time and hold until the red light on the receiver SET LED illuminates solid red. Release buttons. The remote is programmed, and should be set aside.
TO REGISTER A FOURTH REMOTE TRANSMITTER:

1. Switch OFF the receiver.

   **Important**
   
   Steps 2 and 3 must be done within 10 seconds of each other. The FAULT LED on the receiver flashes for the duration of the registration window.

2. Switch ON the receiver.

3. On a 4th remote, press and release the ON button three times, then press the ON button and the Down-Arrow Motion button at the same time and hold until the red light on the receiver SET LED illuminates solid red. Release buttons. The remote is programmed, and should be set aside.
11. AGI Swift Current Limited Warranty

This warranty relates to Belt Conveyors (the “Product”) sold by Batco-Rem, (a division of Ag Growth International Inc., referred to herein as the “Seller”) and applies only to the first user of the Product (meaning a purchaser directly from the Seller or from an authorized dealer or distributor of the Product, referred to herein as the “Buyer”).

This warranty shall only be effective if properly registered with the Seller in accordance with information provided to the Buyer at the time of sale.

1. The Seller warrants to the Buyer that the Product is free from defects in material and workmanship under normal and reasonable use and in accordance with manufacturer’s manual.

2. This warranty applies only to defects in materials and workmanship and not to damage incurred in shipping or handling, through normal wear and tear, or damage due to causes beyond the control of the Seller such as lightning, fire, flood, wind, earthquake, excessive voltage, mechanical shock, water damage, or damage arising out of abuse, alteration, improper assembly, improper installation, improper maintenance or improper repair of the Product.

3. The warranty period for the Product shall be two years from delivery of the Product to the Buyer where the Product is used in a normal farm operation. First year of warranty coverage of parts and repair labour, second year warranty coverage of parts only. Warranty period for the Product shall be 90 days from delivery of the Product to the Buyer where the Product is used in a commercial operation. No warranty is given where the Product was used to convey canola. In the event that any part incorporated into the Product is manufactured and sold to the Seller by a third party vendor, such part is only warranted to the extent of the warranty given by that third party.

4. This warranty does not obligate the Seller to bear costs of travel in replacing defective parts.

5. The obligations set forth in this warranty are conditional upon the Buyer promptly notifying the Seller of any defect and completing reasonably required documentation and, if required, promptly making the Product available for correction.

6. The total liability of the Seller on any claim, whether in contract, tort or otherwise, arising out of, connected with, or resulting from the manufacture, sale, delivery, repair, replacement or use of the Product or any part thereof shall not exceed the price paid for the Product and the Seller shall not be liable for any special indirect, incidental or consequential damages caused by reason of the installation, modification, use, repair, maintenance or mechanical failure of the Product. Consequential or special damages as used herein include, but are not limited to, lost or damaged products or goods, costs of transportation, lost sales, lost orders, lost income, increased overhead, labor and incidental costs and operational inefficiencies.

7. The foregoing warranty is the entire warranty of the Seller to the Buyer and the Buyer shall not be entitled to rely upon any representation or warranty contained in any marketing material of the Seller in respect of the Product. The Seller neither assumes, nor authorizes any other person purporting to act on its behalf to modify or to change this warranty, nor to assume for it any other warranty or liability concerning the Product.

WARRANTY VOID IF NOT REGISTERED
