Field Loader S-Drive

Portable Grain Belt Conveyor Assembly Manual

This manual applies to the following brands and models:

<table>
<thead>
<tr>
<th>Brand</th>
<th>Model 1</th>
<th>Model 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>BCX² 1539</td>
<td>BCX² 1549</td>
<td></td>
</tr>
<tr>
<td>WCX² 1539</td>
<td>WCX² 1549</td>
<td></td>
</tr>
<tr>
<td>HCX² 1549</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

Original Instructions
New in this Manual

The following changes have been made in this revision of the manual:

<table>
<thead>
<tr>
<th>Description</th>
<th>Section</th>
</tr>
</thead>
<tbody>
<tr>
<td>Inserted correct tube layout diagram for HCX 1549 model</td>
<td>Figure 13 on page 33</td>
</tr>

1. Safety

1.1. Safety Alert Symbol and Signal Words

This safety alert symbol indicates important safety messages in this manual. When you see this symbol, be alert to the possibility of injury or death, carefully read the message that follows, and inform others.

Signal Words: Note the use of the signal words DANGER, WARNING, CAUTION, and NOTICE with the safety messages. The appropriate signal word for each message has been selected using the definitions below as a guideline.

- **DANGER**: Indicates an imminently hazardous situation that, if not avoided, will result in serious injury or death.
- **WARNING**: Indicates a hazardous situation that, if not avoided, could result in serious injury or death.
- **CAUTION**: Indicates a hazardous situation that, if not avoided, may result in minor or moderate injury.
- **NOTICE**: Indicates a potentially hazardous situation that, if not avoided, may result in property damage.

1.2. General Product Safety

YOU are responsible for the SAFE use and maintenance of your conveyor. YOU must ensure that you and anyone else who is going to work around the conveyor understands all procedures and related SAFETY information contained in this manual.

Remember, YOU are the key to safety. Good safety practices not only protect you, but also the people around you. Make these practices a working part of your safety program. All accidents can be avoided.

- It is the conveyor owner, operator, and maintenance personnel's responsibility to read and understand ALL safety instructions, safety decals, and manuals and follow them when operating, or maintaining the equipment.

- Owners must give instructions and review the information initially and annually with all personnel before allowing them to operate the conveyor. Untrained users/operators expose themselves and bystanders to possible serious injury or death.

- The conveyor is not intended to be used by children.

- Use the conveyor for its intended purposes only.

- Do not modify the conveyor in any way without written permission from the manufacturer. Unauthorized modification may impair the function and/or safety, and could affect the life of the conveyor. Any unauthorized modification will void the warranty.

- Follow a health and safety program for your worksite. Contact your local occupational health and safety organization for information.
1.3. Moving Conveyor Belt Safety

- DO NOT step on or touch moving conveyor belt.
- Shut off and lock out power to adjust, service, or clean.

1.4. Rotating Parts Safety

- Keep body, hair, and clothing away from rotating pulleys, belts, chains, and sprockets.
- Do not operate with any guard removed or modified. Keep guards in good working order.
- Shut off and remove key or lock out power source before inspecting or servicing machine.

1.5. Drives and Lockout Safety

Inspect the power source(s) before using and know how to shut down in an emergency. Whenever you service or adjust your equipment, make sure you shut down the power source and follow lockout and tagout procedures to prevent inadvertent start-up and hazardous energy release. Know the procedure(s) that applies to your equipment from the following power source(s). Ensure that only 1 key exists for each assigned lock, and that you are the only one that holds that key. Ensure that all personnel are clear before turning on power to equipment.
1.5.1 Gas Engine Safety

**Power Source**
- Keep guards in place and secure.
- Properly ventilate surrounding area.
- Never fill the fuel tank with the engine running, while smoking, or near an open flame. Always shut down and allow engine to cool before filling with fuel.
- Never overfill the tank or spill fuel. If fuel is spilled, clean it up immediately.
- Be sure to use the correct type and grade of fuel. Ground the fuel funnel or nozzle against the filler neck to prevent sparks that could ignite fuel vapors.
- Be sure to replace the fuel fill cap when you are done.

**Lockout**
- For engines with an electric start, remove the ignition key, the spark plug wire, or the spark plug.
- For engines with a rope or crank start, remove the spark plug wire or the spark plug.

1.5.2 Electric Motor Safety

**Power Source**
- Electric motors and controls shall be installed and serviced by a qualified electrician and must meet all local codes and standards.
- A magnetic starter should be used to protect your motor.
- You must have a manual reset button.
- Reset and motor starting controls must be located so that the operator has full view of the entire operation.
- Locate main power disconnect switch within reach from ground level to permit ready access in case of an emergency.
- Motor must be properly grounded.
- Guards must be in place and secure.
- Ensure electrical wiring and cords remain in good condition; replace if necessary.
- Use a totally enclosed electric motor if operating in extremely dusty conditions.

**Lockout**
- The main power disconnect switch should be in the locked position during shutdown or whenever maintenance is performed.
- If reset is required, disconnect all power before resetting motor.
1.5.3 Hydraulic Power Safety

**WARNING**

- Refer to the rules and regulations applicable to the power source operating your hydraulic drive.
- Do not connect or disconnect hydraulic lines while system is under pressure.
- Keep all hydraulic lines away from moving parts and pinch points.
- Escaping hydraulic fluid under pressure will cause serious injury if it penetrates the skin surface (serious infection or toxic reaction can develop). See a doctor immediately if injured.
- Use metal or wood as a backstop when searching for hydraulic leaks and wear proper hand and eye protection.
- Check all hydraulic components are tight and in good condition. Replace any worn, cut, abraded, flattened, or crimped hoses.
- Clean the connections before connecting to equipment.
- Do not attempt any makeshift repairs to the hydraulic fittings or hoses with tape, clamps, or adhesive. The hydraulic system operates under extremely high pressure; such repairs will fail suddenly and create a hazardous and unsafe condition.

**Lockout**

- Always place all hydraulic controls in neutral and relieve system pressure before disconnecting or working on hydraulic system.
1.6. Tire Safety

**WARNING** Failure to follow proper procedures when mounting a tire on a wheel or rim can produce an explosion that may result in serious injury or death.

- DO NOT attempt to mount a tire unless you have the proper equipment and experience to do the job.
- Have a qualified tire dealer or repair service perform required tire maintenance.
- When replacing worn tires, make sure they meet the original tire specifications. Never undersize the replacement tire.
- DO NOT weld to the tire rim with the tire mounted on the rim. This action may cause an explosion which could result in serious injury or death.
- Inflate tires to the manufacturer’s recommended pressure.
- Tires should not be operated at speeds higher than their rated speed.
- Keep wheel lug nuts tightened to manufacturer’s recommendations.
- Never reinflate a tire that has been run flat or seriously under-inflated without removing the tire from the wheel. Have the tire and wheel closely inspected for damage before remounting.

1.7. Battery Safety

**WARNING**

- Wear safety glasses and protective gloves when working near batteries.
- Make certain the battery or terminal covers are in place and in good working order.
- Keep all sparks and flames away from batteries; gas given off by electrolyte is explosive.
- Avoid contact with battery electrolyte. Wash off any spilled electrolyte immediately.
- Do not tip batteries more than 45° to avoid electrolyte loss.
- To avoid injury from sparks or short circuits, disconnect battery ground cable before servicing any part of an electrical system.
### 1.8. Hand Winch Safety

**WARNING** When Equipped:

- Inspect lift cable before using. Replace if frayed or damaged. Make sure lift cable is seated properly in cable sheaves and cable clamps are secure.
- Tighten brake lock by turning winch handle clockwise at least two clicks after lowering the conveyor.
- Lower the conveyor fully before towing, then rotate winch handle until cable has light tension.
- Do not lubricate winch brake discs.

### 1.9. Hydraulic Winch Safety

**WARNING** When Equipped:

- Keep away from rotating cable drum and winch cable. Do not touch or grab cable while winch is being operated or use hands to guide the cable. Failure to heed could result in serious injury.
- Inspect cable and cable clamps before installing and using hydraulic winch. Replace cable if frayed or damaged. Tighten cable clamps if necessary.
- Do not continue to supply power to hydraulic winch after the conveyor has reached full up position.
- Do not disconnect hydraulic quick couplers when lines are pressurized.
- Make sure lift cable is seated in cable pulley.
- Always keep a minimum of 3 cable wraps on the cable drum.
1.10. Personal Protective Equipment

The following Personal Protective Equipment (PPE) should be worn when assembling the equipment.

Safety Glasses
- Wear safety glasses at all times to protect eyes from debris.

Work Gloves
- Wear work gloves to protect your hands from sharp and rough edges.

Steel-Toe Boots
- Wear steel-toe boots to protect feet from falling debris.

Coveralls
- Wear coveralls to protect skin.

Hard Hat
- Wear a hard hat to help protect your head.

1.11. Safety Equipment

The following safety equipment should be kept on site:

Fire Extinguisher
- Provide a fire extinguisher for use in case of an accident. Store in a highly visible and accessible place.

First-Aid Kit
- Have a properly-stocked first-aid kit available for use should the need arise, and know how to use it.

1.12. Safety Decals

- Keep safety decals clean and legible at all times.
• Replace safety decals that are missing or have become illegible. See decal location figures that follow.
• Replaced parts must display the same decal(s) as the original part.
• Replacement safety decals are available free of charge from your distributor, dealer, or factory as applicable.

1.12.1 Decal Installation/Replacement
1. Decal area must be clean and dry, with a temperature above 50°F (10°C).
2. Decide on the exact position before you remove the backing paper.
3. Align the decal over the specified area and carefully press the small portion with the exposed sticky backing in place.
4. Slowly peel back the remaining paper and carefully smooth the remaining portion of the decal in place.
5. Small air pockets can be pierced with a pin and smoothed out using the sign backing paper.

1.12.2 Safety Decal Locations and Details
Replicas of the safety decals that are attached to the conveyor and their messages are shown in the figure(s) that follow. Safe operation and use of the conveyor requires that you familiarize yourself with the various safety decals and the areas or particular functions that the decals apply to, as well as the safety precautions that must be taken to avoid serious injury, death, or damage.

</table>

**ELECTROCUTION HAZARD**

To prevent death or serious injury:

- When operating or moving, keep equipment away from overhead power lines and devices.
- Fully lower equipment before moving.

This equipment is not insulated.

Electrocution can occur without direct contact.

---

<table>
<thead>

**To prevent serious injury or death:**

- Read and understand the manual before assembling, operating, or maintaining the equipment.
- Only trained personnel may assemble, operate, or maintain the equipment.
- Children and untrained personnel must be kept outside of the work area.
- Do not modify the equipment. Keep in good working order.
- If the manual, guards, or decals are missing or damaged, contact factory or representative for free replacements.
- Lock out power before performing maintenance.
- To prevent equipment collapse or upending, support equipment tube while disassembling certain components.
- Electric motors must be grounded. Disconnect power before resetting overloads.

**UPENDING HAZARD**

To prevent death or serious injury:

- Anchor intake end and/or support discharge end to prevent upending.
- Intake end must always have downward weight. Do not release until attached to tow bar or resting on ground.
- Do not raise intake end above tow bar height.
- Empty tube and fully lower before moving.

| P1513009    | ![WARNING](image1) ELECTROCUTION HAZARD  
To prevent serious injury or death:  
• Only qualified personnel should service electrical components.  
• Disconnect and lockout power before inspecting or servicing unit.  
• Keep electrical components in good repair. |
| P1513136    | ![WARNING](image2) CONTENTS MAY BE UNDER PRESSURE  
As part of the fuel vapour retention system, it is normal for your tank to expand from internal pressure. Use the vent screw to relieve pressure and before refueling.  
To remove cap:  
1. Open VENT SCREW on top of cap FULLY.  
2. Locate Pressure Relief Tab under cap. Turn cap until Pressure Relief Tab Lock engages.  
3. Press down on tab, rotate cap 1/4 turn (to relieve pressure before opening tank) and release tab. STOP. Lock may engage again.  
4. PRESS Pressure Relief Tab down again and turn slowly to remove cap.  
To tighten cap:  
• Turn Closure caps until an audible “click” is heard. Failure to follow may result in fuel spillage. |

NOTICE

Belt Direction

To prevent damage to the belt and roller:

- Install roller with roller lagging pointing in the direction of belt travel.
- Annually inspect condition of roller, lagging and belt.
- Ensure that you do not run a machine with loose lagging, or the conveyor belt may become damaged.
### Table 1  Safety Decals (continued)

|             | To prevent belt damage, use correct belt tension and do not attempt to adjust belt tracking with the take-up roller. To set correct belt tension:  
|             | • While conveyor is running empty, tighten nut against the pretensioner (take-up pipe) so that the edge of the indicator pipe is within the green area.  
|             | • Ensure take-up roller is tensioned equally by using a tape to measure distance “X”.  
|             | • After the conveyor belt has been tensioned, check the alignment of all other s-drive rollers and periodically afterward.  
|             | See manual for complete instructions. |

3. Assembly

Before continuing, ensure you have completely read and understood this manual’s Safety section, in addition to the safety information in the section(s) below.

3.1. Assembly Safety

- Do not take chances with safety. The components can be large, heavy, and hard to handle. Always use the proper tools, rated lifting equipment, and lifting points for the job.
- Carry out assembly in a large open area with a level surface.
- Always have two or more people assembling the conveyor.
- Make sure you have sufficient lighting for the work area.
- Tighten all fasteners according to their specifications. Do not replace or substitute bolts, nuts, or other hardware that is of lesser quality than the hardware supplied by the manufacturer.
- Stay away from overhead power lines and other obstructions during assembly. Contact with power lines can cause electrocution.
- Do not work in high winds.

3.2. Check Shipment

Unload the conveyor parts at the assembly site and compare the packing slip to the shipment. Ensure that all items have arrived and that none are damaged.

Report missing or damaged parts immediately to ensure that proper credit is received from AGI or your distributor/dealer, and to ensure that any missing parts can be shipped quickly to avoid holding up the assembly process.

**Important**
- Do not assemble or install damaged components.
### 3.3. Required Tools

- 2–3 pipe stand(s)
- 2 sawhorse(s) (1200 lb [544.3 kg])
- 1 standard socket set(s)
- 2 wrench set(s)
- 1 torque wrench(es)
- 1 set(s) of Allen wrenches
- 1 hammer and punch
- 1 drill with bits 3/16”, 5/16”
- 2 tape measure(s) (25’ [7.6 m])
- 1 tape measure(s) (100’ [30.5 m])
- 1 ratchet strap
- 2 C-clamp(s) or vise grip(s)
- 1 fish tape (100’ [30.5 m])
- 1 tire pressure gauge
- 1 tire chuck
- 1 propane torch
- 1 picker with minimum reach of 12’ (3.7 m) and 4000 lb to 6000 lb (1814 kg to 2722 kg) lifting capacity

### 3.4. Before You Begin

Before you assemble the conveyor:

- Familiarize yourself with all the sub-assemblies, components, and hardware that make up the equipment.
- Have all parts and components on hand, and arrange them for easy access.
- Separate the hardware (bolts, nuts, etc.) and lay them out into groups for easier identification during assembly.
- Ensure there is adequate space to remove the assembled conveyor from the assembly area.

### 3.5. Hydraulic Fittings and Bolt Tightening

Remember the following basic considerations when tightening hydraulic fittings and bolts:

- Tighten all fasteners to the torque specified in Section 5.1 – Bolt Torque on page 133. Do not replace or substitute bolts, nuts, or other hardware that is of lesser quality than the hardware supplied by the manufacturer.
- All hydraulic fittings should be torqued to the recommended specifications. See Section 5.2 – Fittings Torque Values on page 134.

**NOTICE** Do not over-tighten fittings. Over-tightening hose fittings can crack the fittings or motor body and will void the warranty.
3.6. Component Locations

Layout Drawing
Be sure to select the proper layout drawing. The dimensions change for each machine depending on the drive option selected. Incorrect placement of the components affects machine balance and can cause a heavy or light intake. The layout drawing is attached to the packing list.

Mark the Tube
Always ensure that the hopper remains level during the attachment of all components that bolt to the conveyor tubing. Use a tape measure to mark out component locations that bolt to the tube. Mark locations on the top side of the tube. Refer to the tube drawing attached to the packing list for layout measurements and component locations.

Tightening Brackets
For all bolt-on brackets and u-clamps, tighten nuts part-way on one side of bracket, then tighten part-way on opposite side. Do this until bracket is fully tightened and ensure it remains level during this procedure.

Note
During the installation of all u-clamps on the grain conveyor tubes, tighten until the tube begins to deform or crimp. This locks the u-clamps into place. The term “crimp” will be used to describe this technique throughout this manual.

3.7. Assemble the Remainder of the S-Drive

Note
The s-drive normally comes mostly pre-assembled when delivered from the factory. The steps below are the remaining assembly which must be performed.

For each side of the s-drive:

1. Remove the shipping wire holding the square nut (2) onto the take-up roller bolt assembly (1), and thread off the square nut from the take-up roller bolt (see Figure 9).

   Note
   The take-up roller bolt assembly (1) is comprised of the take-up roller bolt, a flat washer, spring, bushing, pre-tensioner (take-up pipe), and hex nuts. This is factory pre-assembled.

2. Remove the take-up bracket (3), which was factory pre-assembled onto the s-drive.
3. Slide the take-up roller bearing units (4) to the spout-end of the s-drive.
4. Insert the square nut (2) into the take-up roller bearing unit (4).
5. Slide the take-up bracket (3) onto the take-up roller bolt assembly (1).
6. Thread the take-up roller bolt assembly (1) into the square nut (2).
7. Hammer the spring pin (5) through the square nut (2) and take-up roller bolt (1).
8. Re-fasten the take-up bracket (3) with the heads of the 3/8" x 1" hex bolts (6) on the inside of the s-drive and the 3/8" locknuts (7) on the outside of the s-drive, to keep the bolt shafts away from the belt.

**Note**
The s-drive bottom guard will be assembled onto the conveyor later, after belt tensioning and alignment.

**Figure 9. S-Drive Components**
3.8. Assemble the Conveyor Tube

1. Review the tube layout figure below for your specific conveyor model to determine the order in which the tubes must be connected together. Part numbers are shown for tube identification.

2. Place the tubes on two support stands to support each tube section. The support stands must be set at equal height (see Figure 10). Anchor the tubes to the stands if necessary to prevent rolling.

⚠️ CAUTION Failure to secure the tubes may result in personal injury.

3. Confirm that all tubes are set level and oriented correctly.

4. Fasten tube flanges together with 7/16” x 1” bolts (2) and 7/16” locknuts (1) as each tube section is placed, starting at the hopper end and working toward the spout end. Ensure the tubes are aligned and the bolts are straight.

   **Note**
   A punch can be used to assist alignment. If you are not careful, it is possible to bolt the flanges together non-concentrically with the bolts crooked through the holes.

3.9. Brand and Model Decal Placement

**Important**
Do not cover any existing safety or instruction decals with the brand and model decals. Also make sure the decals do not interfere with any welded-on brackets or tube flanges.

- The decals should be placed as follows (see Figure 14):
  - Brand (B): as near as possible to the conveyor spout
  - Model (M): as near as possible to the bottom end of the track

Examples of the appearance of brand and model decals are in Figure 15 and Figure 16.

**Figure 14.** Brand (B) and Model (M) Decal Placement

![Brand (B) and Model (M) Decal Placement](image)

**Figure 15.** Brand Decal (example)

![Brand Decal (example)](image)

**Figure 16.** Model Decal (example)

![Model Decal (example)](image)

- Apply decals to both sides of conveyor tube.
- For each decal:
  1. Prepare surface by cleaning thoroughly with soap and water. Surface must be clean and free of dirt, grime, rust and oil. To clean oily surface, wipe with clean cloth and solvent cleaner or isopropyl alcohol.
  2. Position the decal by centering it vertically on the tube and apply masking tape along the top, creating a gate hinge (see Detail A in Figure 17).
  3. Remove backing paper from decal 6” from the top and use the squeegee to adhere decal to the tube (see Detail B). Start at the top center of the decal and work your way outward both left and right using overlapping strokes.
4. As you work your way down the decal, peel back the backing paper 6” at a time. Repeat Step 3 until the entire decal has been applied to the tube (see Detail C as an example).

5. Once the entire decal has been properly adhered to the tube, remove tape hinge from front of decal. Remove the front application tape at a sharp 180° angle.

6. Inspect the entire decal for air pockets; if found, remove them by punching a tiny hole with a pin and then squeegee the surface flat.

7. Squeegee the corners and edges of the decal to ensure proper adhesion and to prevent premature peeling.

Figure 17. Decal Placement Technique

3.10. Serial Number Decal Placement

Place the serial number decal on the conveyor as shown below.
3.11. Install the Spout Roller

1. Insert the roller (2) into the spout (1) (see Figure 19), with the roller lagging pointing in the direction of belt travel (see Figure 18).

Figure 18. Roller with Lagging Pointing in Belt Travel Direction

2. Slide a bearing (5) on each end of the roller and secure to the spout using 1/2" x 1–1/2" carriage bolts (3), square flat washers (4), and 1/2" locknuts (6).

   Important
   If the square shoulder of the carriage bolt still sticks through the spout side plates, you must either add a 2nd square washer or tighten up the nut slowly as to not crack the bearing body.

3. Center the roller (2) in the spout.

4. Make sure the roller (2) is positioned straight by measuring the distance (d) from the end of the roller to the end of the spout weldment sidewall on both sides (it should be the same distance).

5. For each bearing, use a hammer and punch to rotate the lock collar so that it seats onto the inner race of the bearing. Tighten the lock collar securely to the shaft with its hex set screw.

6. Insert the 7/16" x 2-1/2" square-head set screws (7) in the spout.

   Note
   The square-head set screws are used to set the alignment of the belt, after the belt is installed.

### 3.12. Install the Frame Slider

1. Slide the slider (2) onto the track (see Figure 20).
2. Install the cable attach (6) on the track with 7/16" x 1-1/2" bolts (3), 7/16" locknuts (4), and flat washers (5).
3. Install the trackstop (1) on the track with 7/16" x 1-1/2" bolts (3), 7/16" locknuts (4), and flat washers (5).

**Note**

You may need to drill holes to install the trackstop. Refer to your layout drawing to determine the location of the trackstop.
Note
Some conveyors do not require a trackstop. Refer to your layout drawing to determine if your conveyor requires a trackstop.

3.17. Assemble the Weather Guard

1. Install the types of weather guard sections in Table 12 which are indicated by the identifier letters as shown on your particular conveyor model schematic that follows.

2. Connect each weather guard section to the tube brackets as indicated by the position arrows on your particular conveyor model schematic that follows. Use a uni-mount cast plate (1), 3/8" x 1-1/4" capscrew (2), and 3/8" locknut (3). Leave the 3/8" locknuts loose (see Figure 26).

   **NOTICE** Overlap of the weather guard sections must be as shown to prevent belt damage.

3. Confirm all weather guard mount bar holes are aligned.

4. Tighten the 3/8" locknuts (3) after all of the weather guards have been installed.

3.19. Install the Belt

This section describes how to install the conveyor belt in the tube. Refer to the packing slip for the length of the conveyor belt used in the installation.
Thread a Fish Tape through the Conveyor Tube

1. Place the rolled belt on a stand behind the hopper.
2. Pull the conveyor belt over the top of the hopper roller, until just inside the hopper, as shown below.

Figure 29. Rolled Belt Behind a Typical Hopper

3. Feed a fish tape in at the spout, through the tube, and into the hopper.
4. Manually thread the belt around the transition rollers (1) in the hopper.

Figure 30. Belt Through Transition Rollers

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Transition Roller</td>
</tr>
</tbody>
</table>

5. Attach the end of the belt to the fish tape using a clamp, or use a short piece of belt and thread the connector wire through the lacing clips to connect.
Figure 31. Attaching the Short Belt Piece to the Belt

Thread the Conveyor Belt
1. From the spout end, pull the fish tape until the belt emerges from the spout.

Figure 32. Conveyor Belt Pulled Through the Spout

2. Wrap the belt around the spout roller and pull it back under the conveyor tube up to the s-drive.
3. Remove the s-drive bottom guard.
4. Loosen the s-drive pinch roller bolts and take-up roller bolts (on both sides of s-drive) to the end of their threads.

   **Note**
   Do not tighten the nuts on the pinch roller bolts and take-up roller bolts on the s-drive until the belt is fully installed.

5. Guide the belt through the s-drive as shown in the figure below.
6. Pull the conveyor belt out from the back of the s-drive until approximately 6’ (1.8 m) of excess belt remains on the stand behind the hopper.
Figure 33. S-Drive Conveyor Belt Path

2. Pinch Roller Bolt
3. Take-up Roller Bolt
4. Take-up Roller
5. Pinch Roller
6. Return Roller

7. Wrap the belt around the spout roller and back under the conveyor tube to the hopper.
8. Wrap the remaining conveyor belt around the hopper roller and under the tube.

Figure 34. Conveyor Belt Bottom Path

7. Hopper Roller
8. Take-up Bolt
9. Transition Roller
The conveyor belt is now ready to be connected.

**Connect the Conveyor Belt**

1. Attach a strap puller (1) to each end of the belt and secure with vise-grips (2).
   
   **NOTICE** Do not attach the vise grips too tightly, this can damage the belt.

2. Pull the ends of the belt together.

3. Install connector wire through the belt lacing (3).

**Figure 35. Using a Strap Puller**

<table>
<thead>
<tr>

</tr>
</tbody>
</table>

4. On both corners of the trailing edge of the belt, trim a tapered notch to prevent fraying.
Tighten the Conveyor Belt

Use the s-drive take-up roller bolts to set the belt tension.

1. Tighten the take-up roller bolts (1) until the take-up springs are not visible.
2. Measure to be sure both sides are set at the same position.
3. Tighten the pinch roller bolts (2, both sides of s-drive) until the head of bolt contacts the pinch pipe (3).
4. Check to make sure the bolts on the pinch roller bearings are just loose enough to allow the pinch roller to kick back 1/4" during operation (when the belt seam passes through).
5. Re-attach the s-drive bottom guard.
Figure 37. S-Drive Roller Bolts and Pipes

**Type D:**
Mount Bar with Bi-Rollers
3.22. Install the Collapsible Hopper Cloth

Install the Flashing

1. Lay the front flashing (1) on the hopper while ensuring it is flush with the edge of the main hopper frame (see Figure 42).

   Note
   The textured side of the flashings should be facing down.

2. Install transition flashing (3) using 1/4" x 1" self-tapping screws (4), 1/4" flat washers (5), 1/4" x 1-1/4" flange bolts (6), and 1/4" hex nuts (7).

3. Lay the side flashings (2) on the hopper while ensuring they are flush with the edge of the main hopper frame and overlapping the front flashing.

</table>
Install the Hopper Spring

1. Slide hopper spring over tubes on the sides of the hopper. See Figure 43 for correct spring orientation.
2. Rotate the spring so that the loop of the spring coil is locked in place by the slot. See Figure 44.

Figure 43. Installing the Hopper Springs
Figure 44. Lock the Hopper Spring

Install the Hopper Cloth

1. Slide the tubes (1, 2) into the hopper cloth (4).

2. Connect the front corners with the slip-on rail fittings (3). Orient the fittings so that the Allen screws are facing down. See Figure 45.

Table 18. Components for Installing the Hopper Cloth onto the Conveyor

<table>
<thead>
<tr>

<tr>
<td>7</td>
<td>Split Loom (length in feet)</td>
<td>19</td>
</tr>
</tbody>
</table>
3. Tighten the Allen screws to secure the tubes in place.
4. Slide the open end of the tubes (1) over the hopper springs. See Figure 46.

Figure 46. Installing the Hopper Cloth
5. Pull the upper front frame down until the bottom of the cloth touches the front flashing, and hold it in place with a bungee cord around the front frame of the hopper weldment (see Figure 47).

**Note**
The length of the upper side frames provides leverage to pull the upper front frame down against the opposing torque of the springs.

Figure 47. Holding Upper Frame with Bungee Cord

6. Attach the hopper cloth to the conveyor (see Figure 48):
   - First, attach the front of the hopper cloth to the front flashing. Afterward, attach the sides.
   - Drill through the hopper cloth and use the existing holes as a guide through the lower frames, flashings, and hopper weldment.
   - Fasten using 1/4" x 1-1/4" elevator bolts (5) and 1/4" nuts (6).
7. Open split loom (7) along the slit and snap over the upper frame to secure hopper cloth.

3.23. Install the Collapsible Hopper Cloth Controls

Install the Handle

1. Attach the hopper handle (1) to the handle mount using a 3/8" x 1–1/2" bolt (2), 3/8" nylon washer (3), and two 3/8" hex nuts (4) (see Figure 49).

   Note
   Ensure the handle can pivot after tightening the bolt.

Table 19. Handle Components

<td>3/8&quot; Hex Nut</td>
</tr>
</tbody>
</table>
Install the Cable and Clamps

1. Point the hopper handle toward the hopper (see Figure 50).
2. Secure the cable (1) to the handle with a cable clamp (2).
3. Route the cable through the cable rung (3) and around the cable sheaves.
4. Attach a 7/8” cable clamp (4) to the front upper frame using one 5/16” x 1” bolt (5), one 5/16” nut (6) and two 5/16” flat washers (7). See Figure 51.
5. Loop the cable (1) around the 5/16” x 1” bolt (5) and secure with 1/4” cable clamp (2).
6. Test the function of the collapsible hopper cloth controls by raising and lowering the handle. Adjust cable tension as required.

3.24. Attach the Angle Indicator

Attach the angle indicator bracket (1) to the weather guard bracket using plate (2), 1/4" x 3/4" carriage bolts (3) and 1/4 flanged nuts (4). See Figure 52.

**Important**

Ensure that the angle indicator base is level with the flat top of the weather guard.

3.25. Attach the Hitch

1. Attach the hitch (1) to the hopper weldment using 1/2" x 2" bolts (2), 7/16" flat washers (3) and 1/2" nuts (4).

2. Insert the tongue (5) into the tongue stub.

3. Secure the tongue in place using 5/8" x 3" hitch pin (6) and 3/16" x 3–1/4" hairpin (7).

### 3.26. Install the Spout Hood

1. Place the hood (2) around the bearing assembly (see Figure 54).
2. Use 1/4" x 1" self-tapping screws (3) and 1/4" flat washers (4) to tighten the hood (2) to the conveyor spout (1).

**Note**

Make sure the screws will not interfere with belt operation.

</tbody>
</table>

Figure 55. Attaching the Wheels to the Axle

Note
Wheels may have four or six bolts, depending on the model of conveyor.

3.28. Assemble the A-Frame

Ensure the wheels are mounted to the axle before beginning this procedure.

1. Loosely fasten the axle arms (9) to the axle (12) using one 5/8" x 5" bolt (15), three 5/8" x 2" bolts (13), five 5/8" flat washers (14), and four 5/8" nylon locknuts (8).

   Note
   The axle arms will be tightened after the upright arms have been installed.

2. Fasten the axle arms to the suspension bracket using 3/4" x 2" hex bolts (11) and 3/4" nylon locknuts (10).
3. Secure the slider (4) to the end of the track (towards the spout) using vise-grips.
4. Fasten upright arms (2) to the slider (4) using 3/4" flat washers (1) and 1/4" x 2" cotter pins (3).
5. Lift the spout end of the tube until the loose ends of the upright arms align with their brackets on the axle.
6. Fasten the upright arms to the axle using 1" x 3" hex bolts (6) and 1" nylon locknuts (5).
7. Tighten the bolts that fasten the axle arms to the axle.
8. Lower tube and remove vise grips.

**WARNING** Do not remove the tube support(s) until the conveyor is fully assembled.

</tbody>
</table>
3.29. Install the Tube Lift Cable

1. Wrap the cable (1) around the bottom side of the winch drum with three complete wraps around the drum when conveyor is in transport position (see Figure 57).
   
   **WARNING** Failure to follow could result in conveyor collapse and cause serious injury.

2. Thread cable onto drum and secure with spool anchor.

3. Run the cable towards the spout.

4. **For models with a hand winch:** Route the cable through the motor mount pipe (see Figure 58).

   **Note**
   If your model has a hydraulic winch, then the winch is mounted closer to the spout than the s-drive, so routing the cable through the motor mount pipe is not necessary in that case.

5. Thread the cable through the slider pulley.

6. Run the cable from the slider pulley towards the hopper and stop at the cable attach (3).

7. Loop the cable under and around the cable attach and secure it with two 5/16" cable clamps (2).

8. Trim excess cable.

9. Test the function of the winch by lifting the conveyor to its raised position.
WARNING Crushing/impact hazard
Do not stand under the conveyor while testing the winch. The conveyor may drop unexpectedly. Ensure all equipment and personnel are clear of the conveyor while testing the winch.

NOTICE The tube lift components may become damaged.
Stop the test if anything should slide, slip, or jam. Correct the issue before continuing.

|      | • for hydraulic winch – 44' Cable 5/16" 7 x 19 GAC  
|      | **49' Conveyor:** 44' Cable 5/16" 7 x 19 GAC (both hand winch and hydraulic winch) |
| 2    | 5/16" Cable Clamp |
| 3    | Small Cable Attach |

Figure 57. Installing the Tube Lift Cable

Note
The preceding figure depicts a hand winch.
3.30. Align the Winch

This procedure describes the alignment of the winch.

1. Check the alignment of the winch by watching the cable wrapping on the drum as the conveyor is raised. Proper alignment is achieved when the cable indexes, filling each row on the drum evenly and not piling up against one side.

2. Lower the conveyor fully if the cable does not index properly until there is slack in the cable.

3. Loosen the bolts holding the winch, adjust the winch, re-tighten bolts and retest.
3.31. Install the Over-Mount Gas/Electric Drive

This procedure describes the installation of the over-mount gas drive or electric drive.

See Table 27 for a list of procedures required to install the gas drive.

See Table 28 for a list of procedures required to install electric drive.

3.31.1 Install the Motor Mount

1. Attach the motor mount (1) to the conveyor tube brackets using 7/16" x 1" bolts (2) and 7/16" locknuts (3) (see Figure 59).

   **Note**
   Orient the motor mount precisely as shown in Figure 59.

**Table 29. Drive Mount Components**

</tr>
</tbody>
</table>

**Figure 59. Motor Mount**

3.31.2 Install the Gearbox

1. Check the oil level in the gearbox. It should be 1/2 full.

2. Attach the gearbox (1) to the motor mount using 1/2" x 1-1/4" bolts (2) and 1/2" lock washers (3) (see Figure 60).

   **Note**
   Do not tighten the gearbox bolts.

3. Connect the gearbox breather (fitting, hose, vent) (4) to the gearbox breather hole (see Figure 61).
Table 30. Gearbox Components

Figure 60. Installing the Gearbox

Figure 61. Gearbox Breather
3.31.3 Install the Slider Mount

1. Install the slider mount (4) onto the motor mount using 7/16" x 1–1/2" bolts (5), 7/16" flat washers (8), and 7/16" locknuts (3).

   **Note**
   Orient the slider mount exactly with the 5/16" x 3/4" bolts (7) on the side they are shown on in Figure 62. Leave the 5/16" bolts loose until the motor/engine is mounted. Push the slider mount up against the welded nuts on the motor mount.

</tr>
</tbody>
</table>

2. Feed the gearbox breather hose and vent through the slider mount (see Figure 63).

3. Insert the 1/2" x 2-1/2" tap bolts (6) to the motor mount.
3.31.4 Install the Motor and Back Plates

1. Install the gas engine or electric motor (1) on the slider mount. At the same time, secure the ground wires for the battery, and clutch (if equipped), to the motor mount bolt (location indicated by the red arrow) using a flat washer (see Figure 64).

   **Important**
   Installation and wiring for the gas engine or the electric motor are to be done by a certified technician and should be based on OEM (original equipment manufacturer) specifications. Some hardware has been included in the drive kit. Not all installations will require all parts. After the conveyor is completely assembled, place finishing zip-ties on all cables and wiring to ensure all lines are snug in place.

   **Note**
   For Kohler engines, for the approximate correct position of the engine on the slider mount, measure 2–3/4" from the engine base to the outer edge of the slider mount pipe. Also measure approximately 7/8" from the slider bar closest to the hopper to the edge of the slider mount closest to the hopper. Then snugly install the motor mount bolts (but do not tighten).

2. **For a gas engine:**
   a. Secure the engine drain hose on the engine base (not shown).
   b. Install the choke and throttle cables to the engine and route them to the control box.
   c. Fasten the top end of the muffler support bracket onto the muffler shield and muffler (not shown).
   d. Install the engine exhaust pipes onto the engine (not shown). Install the muffler and muffler shield onto the engine exhaust pipes. Install the rain cap on the muffler.
   e. Fasten the bottom end of the muffler support bracket to the top of the base of the engine block with a motor mount bolt.
   f. Fill engine with oil up to the dipstick line (see Table 32).
Table 32. Oil Quantity Required

3. Attach the engine back guard (2) to the motor mount using 7/16" x 1" bolts (3) and 7/16" locknuts (4) (see Figure 64).

4. Attach the top end of motor mount side plate (5) to the motor mount using 7/16" x 1" bolts (3), 7/16" flat washers (10), and 7/16" locknuts (4) (see Figure 65).

5. Secure the bottom end of the motor mount side plate to the s-drive guard using 1/4" x 3/4" bolts (6), 1/4" lock washers (8), 1/4" flat washers (9), and 1/4" threaded inserts (7).

</table>

**Figure 66. Installing the Rocker Arm Pivot Shaft**

**Important**
If your conveyor has a gas engine drive installed on it, you must also install a soft start electric clutch. If your conveyor has an electric motor installed on it, this drive will not have a soft start electric clutch installed on it.

**3. For models with a gas engine and soft start electric clutch:** Fasten a 1/2\" x 5\" tap bolt (17) and a 1/2\" hex nut (18) through the tab on the back of the motor mount side plate (see Figure 67).
Note
After installing the belt, use the tap bolt (17) to adjust the belt tension.

3.31.6 Electric Drive — Install the Overcenter Handle

1. Attach the push rod (5) to the rocker arm sleeve with a bolt (6) and 1/2" locknut (7) (see Figure 68).

Note
Rotate the rocker arm pivot shaft to facilitate installation of the bolt through the available hole.

2. Thread the adjuster (8) into the push rod (5).

</table>
3.31.7 Install the Pulleys and Belts, and if equipped, the Soft Start Electric Clutch

1. Install the idler pulley (1) onto the rocker arm pivot shaft using a 1/2" bolt (2), 1/2" flat washers (3), two bushings (12), and a 1/2" locknut (4) (see Figure 70). The side of the idler pulley with an inset hub faces away from the engine/motor.

2. Apply grease to the idler pulley.

3. Install the pulleys (5, 6) and keys (9) onto the gearbox and s-drive shaft, with the “noses” of the pulleys facing inward toward the gearbox and s-drive. Do not tighten pulley set screws until pulleys are aligned.

4. Align the pulleys with a straightedge.

5. **For models with mover kit:** see Section 3.35 – Hydraulic Wet Kit on page 120 to install the hydraulic pump pulleys and belt.

6. **For models without mover kit:** insert a 1/4" x 3–1/4" square key (not shown) onto the gas engine or electric motor shaft for the double pulley.

   **Important**
   If your conveyor has a gas engine drive installed on it, you must also install a soft start electric clutch. If your conveyor has an electric motor installed on it, this drive will not have a soft start electric clutch installed on it.

7. **For models with a gas engine and soft start electric clutch:**
   a. Install the clutch stop bracket (15) onto the engine using one 3/8" x 1" bolt (16) with 1/2" lock washer (17) (see Figure 71).
b. Slide the soft start electric clutch (with factory pre-assembled double pulley) (18) onto the engine shaft and clutch stop bracket (15). Tighten the clutch using a 7/16” x 3” fine-thread bolt (19) and 7/16” lock washer (22).

c. Attach the electric clutch module (20) to the back of the motor guard plate using tek screws (21) (see Figure 72).

d. Install the wiring for the soft start electric clutch (see Figure 73). Secure the ground wire to the motor mount bolt.

8. **For models with an electric motor:** Install the pulley (7) and bushing (14) onto the motor shaft (see Figure 71). Do not tighten bushing bolts until pulleys are aligned.

   **Note**
   If an electric motor drive model has a mover kit, the double pulley (7) and the hydraulic drive pulley that are installed on the motor shaft may be together replaced by a triple pulley.

9. Install the 12” pulley (8) and key (9) onto the gearbox (with the pulley “nose” facing inward toward the gearbox). Do not tighten pulley set screws until pulleys are aligned.

10. Align the pulleys with a straightedge.

11. Install the belts (10, 11).

12. Tighten gearbox bolts, motor base bolts, slider mount bolts, motor mount tap bolts, and tighten the pulley set screws.

   **Important**
   Once all bolts and set screws are tightened, re-check alignment. Proper alignment will prolong belt life.

13. **For models with a gas engine:** set the belt tension on the s-drive and gearbox using the adjustment tap bolt against the rocker arm sleeve.

14. **For models with an electric motor:** set the belt tension on the s-drive and gearbox using the threaded adjuster rod connected to the overcenter handle.

   **Note**
   Belts should deflect 1/2” (1.27 cm) to 3/4” (1.91 cm) when pushed on with a 5 lb (22.2 N) force.

3.31.8 Install the Pulley Guards

1. Attach the safety decals on and under the pulley guards (1, 2) (see Figure 74 and Figure 75). See decal location diagram in Safety chapter.

2. For each pulley guard, hold the guard over the belt and attach the hinge to the back plate using 7/16" x 1" bolts (3) and 7/16" locknuts (4).

3. Attach the latch (5) to the s-drive side plate using 3/16" x 1/2" rivets (6).

4. Attach the latch (5) to the motor guard using 3/16" x 1/2" rivets (6).

5. Install the shaft guard (see Section 3.36 – Install the Shaft Guard on page 127).

### 3.31.9 Gas Drive — Battery Kit

1. Attach the battery mount (2) to the engine mount with 7/16" x 1" bolts (3), 7/16" flat washers (8), and 7/16" locknuts (1) (see Figure 76).

2. Set the battery (6) in place.

3. Secure the battery with clamp (5) and 3/8" locknuts (7).

4. Connect the battery cables (4) to the engine as follows:
   - a. The ground cable is fastened to a motor mount bolt.
   - b. The positive cable is connected to the starter.

3.32. Install the Under-Mount Gas Drive (Option for FX1545FL Only)

3.32.1 Install the Drive Mount and Platform

1. Install the crossbar mount (1) to the conveyor tube using 7/16” x 1” bolts (2) and 7/16” locknuts (3) (see Figure 77).

   Note
   Orient the crossbar mount precisely as indicated in Figure 78.

2. Install the hopper-side mount arms (4, 7) onto the crossbar mount using 3/8” x 1-1/4” bolts (5) and 3/8” locknuts (6).

   Note
   In this section, the left and right sides are defined by viewing from the conveyor’s hopper toward the spout.

   Note
   Do not tighten the mount arm bolts. They will be squared and tightened later.

3. Install the spout-side mount arms (11, 12) onto the crossbar mount using 3/8” x 1-1/4” bolts (5) and 3/8” locknuts (6).

4. Install the engine platform (8) onto the bottom of the mount arms using 3/8” x 1” bolts (9) and 3/8” locknuts (10).

3.32.2 Install the Frame Stabilizers

1. Remove the 1/2" nylock nut (8) on the end of the s-drive (nearest the hopper) as shown in Figure 79 and replace the existing s-drive bolt at this location with the supplied 1/2" x 1-3/4" bolt (4).
2. Install the hopper-side frame stabilizer (7) using a 3/8" x 1-1/4" bolt (1) and 3/8" locknut (3) onto the hopper-side right mount arm, and using the 1/2" x 1-3/4" bolt (4) and the 1/2" nylock nut (8) onto the s-drive.

3. Remove the 1/2" nylock nut (8) on the end of the s-drive (nearest the spout) and replace the existing s-drive bolt at this location with the supplied 3/8" x 1-1/2" bolt (5).

4. Install the spout-side frame stabilizer (2) using a 3/8" x 1-1/4" bolt (1) and 3/8" locknut (3) onto the spout-side right mount arm, and using the 3/8" x 1-1/2" bolt (5) and the 1/2" nylock nut (8) onto the s-drive.

5. Tighten the mount arm bolts.

   **Note**
   Use a clamp to keep the mount arms square and flush with the crossbar mount plates while tightening the bolts.

3.32.3 Install the Hydraulic Pump, Gearbox, and Belt Tightener

1. Assemble the hydraulic pump engagement handle (1) (see Figure 80) as follows:
   a. Attach the pivot handle (2) to the pivot shaft (3) using a 3/8" x 2-1/2" bolt (4), a 3/8" locknut (5), and six 3/8" washers (6).
   b. Attach the 1/4" x 2-1/4" quick pin (7).

2. Install the fittings (24, 25) on the hydraulic pump (see Figure 81).

3. Install the pump mount plate (8) and hydraulic pump (9) onto the gearbox mount (10) using 3/8" x 1-1/2" carriage bolts (11), and 3/8" locknuts (5).

   **Note**
   Make sure the orientation of the fittings and direction arrow on the pump are as shown as the pump is mounted.

4. Thread the end of the pivot shaft (3) into the nut of the pump mount plate (8).

5. Install the gearbox mount (10) onto the engine platform using four 1/2" x 1-1/2" hex bolts (12) and 1/2" locknuts (13).

6. Install the gearbox (14) on top of the gearbox mount (10) using four 1/2" x 1-1/2" hex bolts (12), 1/2" lock washers (15), and 1/2" flat washers (16) (see Figure 82).

   **Note**
   Do not tighten the gearbox bolts at this time.
7. Install the belt tightener swivel mount (17) on top of the gearbox using four 1/2" x 1-1/2" hex bolts (12), 1/2" lock washers (15), and 1/2" flat washers (16).

8. Insert the rocker arm pivot shaft (18) into the pipe of the swivel mount (17).

9. Attach the rocker arm sleeve (19) with a 3/8" x 2" bolt (20) and 3/8" locknut (5).

10. Insert the 1/2" x 4" adjustment tap bolt (21) and 1/2" hex nut (22) in the swivel mount (17).

11. Install the gearbox oil filler extension / breather (23).

Figure 80. Installing the Hydraulic Pump

Figure 81. Installing Hydraulic Fittings
3.3.2.4 Install the Gas Engine

1. Install the engine adjustment plate (1) and engine (2) onto the engine platform using four 3/8” x 2” hex bolts (3), 3/8” flat washers (4), and 3/8” locknuts (5). At the same time, secure the ground wires for the battery and clutch to the motor mount bolt (3) (location indicated by the red arrow) using a 3/8” flat washer (4) (see Figure 83).

Important
Installation and wiring for the gas engine are to be done by a certified technician and should be based on OEM (original equipment manufacturer) specifications. Some hardware has been included in the drive kit. Not all installations will require all parts. After the conveyor is completely assembled, place finishing zip-ties on all cables and wiring to ensure all lines are snug in place.

2. Remove the plug insert (6) and assemble the square plug (7), elbow (8), and drain pipe (9) into the engine’s oil drain port.

Figure 83.  Installing the Engine

3.32.5 Install the Pulleys, Belts, and Soft Start Electric Clutch

1. Install the hydraulic pump pulley (1) onto the hydraulic pump (see Figure 84).

   **Note**
   
   The key for the pump pulley is factory pre-installed on the hydraulic pump shaft.

2. Install the hydraulic drive pulley (2) onto the engine shaft with a 1/4" x 3-1/4" square key (3).
3. Align the hydraulic pump and drive pulleys with a straightedge.
4. Install the hydraulic pump belt (4).
5. Install the 12" pulley (5) onto the gearbox with a 3/8" x 2" square key (6) (with the pulley “nose” facing outward away from the gearbox).

6. Tighten gearbox bolts.

7. Install the idler pulley (7) onto the rocker arm pivot shaft (8) with a 1/2" x 3-1/2" bolt (9), three 1/2" flat washers (10), two bushings (11), and a 1/2" locknut (12). The side of the idler pulley with an inset hub faces away from the engine.

8. Install the 6" pulley (13) onto the gearbox with a 3/8" x 2" square key (6) (with the pulley “nose” facing inward toward the gearbox).

9. Install the 10" pulley (14) onto the s-drive with a 3/8" x 2" square key (6) (with the pulley “nose” facing inward toward the s-drive).

10. Align the gearbox and s-drive pulleys with a straightedge.

11. Apply grease to the idler pulley.

12. Install the banded belt (15) on the gearbox and s-drive pulleys (13, 14).

13. Set the tension on the banded belt using the adjustment tap bolt (16) in the swivel mount.

Note

For tensioning, belts should deflect 1/2" (1.27 cm) to 3/4" (1.91 cm) when pushed on with a 5 lb (22.2 N) force.

</table>
14. Install the clutch stop bracket (17) onto the engine with a 3/8" x 1-1/4" bolt (18) and 3/8" lock washer (19) (see Figure 85).

15. Slide the soft start electric clutch (20) onto the engine shaft and clutch stop bracket (17). Align the clutch pulley with the 12" pulley (5) using a straightedge. Tighten the clutch using a 7/16" x 3" fine-thread bolt (21) and 7/16" lock washer (22).

**Note**

The soft start electric clutch comes with a factory pre-assembled 4" double pulley which is assembled onto the engine shaft using the same 1/4" x 3-1/4" key (3) that was used to install the hydraulic drive pulley (1).

16. Install two drive belts (23).

17. Set the tension of the drive belts (23) using the tap bolt (24) for the engine adjustment plate.

18. Set the tension of the hydraulic pump belt (4) by threading the pivot shaft (25) in or out of the nut of the pump mount plate.

19. Install the clutch wiring module mount (26) using one 3/8" x 1" flange bolt (27) and locknut for the hopper-side left mount arm.

20. Install the electric clutch wiring module (28) using two 1/4" x 1" Tek screws (29).

21. Install the wiring for soft start electric clutch (see Figure 86). Secure the ground wire to the motor mount bolt.

### Figure 85. Installing the Soft Start Electric Clutch
3.32.6 Install the Battery and Engine Guards

1. Install battery box (4) by drilling holes in the box that align with the pre-drilled holes on the engine platform and using 5/16" x 1" bolts (2) and 5/16" locknuts (1) (see Figure 87).

2. Install battery (3) into battery box (4).

3. Connect two 37" battery cables (4) to the engine as follows:
   a. The ground cable is fastened to a motor mount bolt.
   b. The positive cable is connected to the starter.

4. Install the choke and throttle cables to the engine and route them to the control box.

5. Fasten the top end of the muffler support bracket (7) onto the muffler shield and muffler (not shown).

6. Install the engine exhaust pipes onto the engine (not shown). Install the muffler and muffler shield onto the engine exhaust pipes. Install the rain cap on the muffler.
7. Fasten the bottom end of the muffler support bracket (7) to the engine adjustment plate with a 1/4" x 3/4" carriage bolt (6) and 1/4" locknut (8).

8. Fill engine with oil up to the dipstick line.

   **Note**
   For a Kohler engine, the oil quantity required is approximately 1.8 L.

9. Refer to the Hydraulic Wet Kit section to install the hydraulic tank.

10. Route and install the hydraulic hoses (see “Assemble the Hydraulic Hose” in your wheel move manual for guidelines on routing hydraulic hoses).

11. Install the hopper-side engine guard (6) using 3/8" x 1" bolts (7) and 3/8" locknuts (8) (see Figure 88).

12. Install the spout-side engine guard (9) using 3/8" x 1" bolts (7) and 3/8" locknuts (8).

   **Note**
   Make sure the flange nuts are on the side of the engine guard as shown so the serrations in the flange nuts cut through the paint and into the metal of the engine guard to provide a good connection for the ground wire.

**3.32.7 Install the Guards**

1. Install the top guard back plate (5) using 1/4" x 3/4" bolts (4), 1/4" lock washers (2), and 1/4" flat washers (3) (see Figure 89).

2. Install the bottom guard back plate (6) using 1/4" x 3/4" bolts (4), 1/4" lock washers (2), and 1/4" flat washers (3).

3. Install the belt guard hinge (7) using 3/8" x 1" bolts (8) and 3/8" locknuts (10).

4. Install the clasp plate (11) using a 3/8" x 1-1/4" bolt (9) and 3/8" locknut (10).

5. Install the two top clasp brackets (12) using 3/8" x 1" bolts (8) and 3/8" locknuts (10).

6. Install the belt guard (14) using the belt guard hinge 3/8" x 5-1/2" bolt (13) and 3/8" locknut (15). Adjust the top clasp brackets and belt guard clamps as necessary for the guard to close properly and tightly.

7. Install the top (17) and side (16) engine guards using 1/4" x 3/4" bolts (4), 1/4" lock washers (2), and 1/4" flat washers (3).

8. Install the lower left s-drive guard (18) using 1/4" x 3/4" bolts (4), 1/4" lock washers (2), and 1/4" flat washers (3).

Figure 89. Guards
3.32.8 Installing Side Mounted Muffler

1. Loosely assemble the muffler and the muffler extension with the muffler clamps as seen in Figure 90.
2. Use a pry bar to move plastic guard and loosely attach whiz-nut as seen in Figure 91.
3. Ensure the muffler and the muffler extension are firmly inserted.
4. Tighten the whiz-nut and the muffler clamps.

Figure 90. Installing Muffler Extension to the Muffler
3.33. Gas Drive — Control Box

1. **For models that do not have a welded mount bracket:** Attach the control box to the tube with 10" x 2-1/2" u-clamp (9), 7/16" x 1-1/2" bolts (10) and 7/16" nylock nuts (11).

2. Remove the top cover (1) (see Figure 92 on page 110). Tighten the u-clamp until the tube begins to crimp.

3. Mount the throttle cable (2), choke cable (5) (if equipped with a carburetor engine), clutch switch (3) (if equipped with an electric clutch), and ignition switch (4). See Figure 93.

4. Consult the OEM (original equipment manufacturers) manual to make all required electrical connections. Remove the key, plug in the extension wiring harness (12), and fasten it to the side plastic guard on the engine using small self-tapping screws (see Figure 94). After the conveyor is completely assembled, place finishing zip-ties on all cables and wiring to ensure all lines are snug in place.

5. Replace the top cover and secure with 1/4" x 3/4" bolts (8), 1/4" washers (6), and 1/4" lock washers (7).

3.34. Install the Tank Kit and the Primer Bulb

Depending on the region two different versions of tank kit are provided with the conveyors. The size and shape of the fuel tank can vary depending on the conveyor series. EPA tanks are provided to the conveyor for US only. Examples of EPA and non-EPA tank are shown in Figure 95 below:

**Figure 95. Gas Tank Type**

![Gas Tank Type Diagram](image)

### 3.34.1 Gas Drive — EPA Tank Kit (for USA only)

1. Attach the plastic tank mount bracket (1) to the tube using 7/16” x 1” bolts (2) and 7/16” locknuts (3) (see Figure 96).
2. Secure the tank (6) to the tank bracket with gear clamps (4) (see Figure 97).
3. Attach the 1/4” hose barb (7) to the tank outlet (see Figure 98).
4. Connect the 1/4” fuel line to the hose barb and primer bulb with hose clamps (8).
5. Connect a fuel filter using 1/4” fuel line to the primer bulb. Use a reasonable length of fuel line so that the fuel demand valve can easily be installed between the primer bulb and the fuel filter.
6. Cut the 1/4” fuel line between the primer bulb and the fuel filter. Insert the fuel demand valve (10) into the fuel line with hose clamps (8) (see Figure 99).

3.34.2 Gas Drive — Tank Kit (for outside USA)

1. Attach the plastic tank mount bracket (1) to the tube using 7/16" x 1" bolts (2) and 7/16" locknuts (3) (see Figure 100).
2. Secure the tank (6) to the tank bracket with gear clamps (4) (see Figure 101).
3. Attach the 1/4" hose barb (7) to the tank outlet.
4. Connect the 1/4" fuel line to the hose barb and primer bulb with hose clamps (8).
5. Insert the square plug (10) into the hole in the bottom of the tank nearer to the spout.

Figure 100.  Tank Mount

Figure 101.  Gas Tank
3.34.3 Gas Drive — Install Primer Bulb

Important
Check the primer bulb for setup orientation for proper fuel flow direction. The red end points of the bulb must connect to the gas tank side. Arrows, imprinted on the primer bulb, indicate the direction of fuel flow, which has to be from gas tank to gas engine. Check for any defects in the bulb and hoses prior to installation.

1. Route and install the fuel hose of reasonable length from the fuel tank to the primer bulb. The hose connection settings may vary depending on the fuel tank type. Refer to Figure 102 and Figure 103.

Figure 102. Primer Bulb

![Primer Bulb Diagram](image1)

Figure 103. Hose Routing From Fuel Tank

<table>
<thead>
<tr>
<th>EPA Tank</th>
<th>Non-EPA Tank</th>
</tr>
</thead>
<tbody>
<tr>
<td><img src="image2" alt="EPA Gas Tank" /></td>
<td><img src="image3" alt="Non-EPA Gas Tank" /></td>
</tr>
</tbody>
</table>

2. Use hose clamps to secure the hose tightly at each end of the fuel hose.
3. A fuel filter (Figure 105) also is required between the engine and the primer bulb. Connect the fuel filter to the primer bulb using a fuel hose with reasonable length and two clamps for each end of the hose.

- If equipped with an EPA tank kit, a fuel demand valve is required to install with the primer bulb (refer to Figure 103). In this case, the fuel filter needs to be attached after the fuel demand valve before the engine.
4. Secure the fuel hoses with zip ties.

After installation check:
Note
Before checking the primer bulb, please proceed and complete all the assemblies first and after the conveyor is completely assembled, place finishing zip-ties on all fuel hoses to ensure all lines are snug in place. Also zip-tie the gearbox breather to the fuel hose above the fuel filter.

1. Prime the fuel system with the primer bulb until fuel is seen in the fuel filter.
2. Run the machine and check all connections for any leaks or loose fitting.

Important
Do not start the engine on empty fuel, before pumping the primer bulb. Otherwise you risk wearing out the battery, and may risk of engine failure.

3.35. Hydraulic Wet Kit

The hydraulic wet kit is an option for gas or electric drives.

3.35.1 Install the Hydraulic Tank Mount (for Over-Mount and Under-Mount)

This procedure only applies for models with clamp-on tank mount brackets.

1. Position the mount brackets (1) just below the s-drive (see Figure 107).
2. Secure the brackets (1) to the tube using 10" x 2-1/2" u-clamps (2), 7/16" x 1-1/2" bolts (3), and 7/16" nuts (4).
3. tighten the u-clamp until the tube begins to crimp.

</tr>
<tr>
<td>4</td>
<td>7/16&quot; Nylock Nut Gr8</td>
</tr>
</tbody>
</table>
3.35.2 Install the Hydraulic Tank (for Over-Mount and Under-Mount)

1. Install the hydraulic tank (1) to the mount brackets with gear clamps (2) (see Figure 108).

**Note**
Fittings (3, 4) are factory pre-installed on the tank.

**Table 52. Hydraulic Tank Components**

<table>

<td>10 ORB x 3/4&quot; Hose Barb</td>
</tr>
</tbody>
</table>
Note
The preceding figure depicts a weld-on bracket.

3.35.3 Install the Hydraulic Pump (for Over-Mount)

1. Install the fittings (5, 6) on the hydraulic pump (see Figure 109).

2. Secure the pump mount (1) and pump (2) to the slots in the motor back plate using 3/8" x 1-1/2" bolts (3) and 3/8" nuts (4). Leave the bolts loose.

   Note
   Make sure the orientation of the fittings and direction arrow on the pump are as shown as the pump is mounted.

</tbody>
</table>
3.35.4 Install the Pivot Handle (for Over-Mount)

1. Attach the pivot handle (1) to the pivot shaft (2) using a 3/8" x 2-1/2" bolt (3), a 3/8" locknut (4), and six 3/8" washers (5) (see Figure 110).

2. Attach the 1/4" x 2-1/4" quick pin (6).

3. Thread the end of the pivot shaft (2) into the nut on the pump mount.

**Table 54. Pivot Handle and Fasteners**

</tbody>
</table>
3.35.5 *Install the Pulleys and Belt (for Over-Mount)*

1. Install the hydraulic pump pulley (2) onto the hydraulic pump (see Figure 111).

   **Note**
   The key for the pump pulley is factory pre-installed on the hydraulic pump shaft.

2. Install the hydraulic drive pulley (1) onto the engine shaft with a 1/4" x 3-1/4" square key (4).

3. Align the pulleys using a straight edge.

4. Tighten hydraulic pump base bolts and pulley set screws.

   **Important**
   Once all bolts and set screws are tightened, re-check alignment. Proper alignment will prolong belt life.

5. Install the belt (3).

6. Set the belt tension by adjusting threaded pivot shaft connected to the pivot handle.

   **Note**
   Belts should deflect 1/2" (1.27 cm) to 3/4" (1.91 cm) when pushed on with a 5 lb (22.2 N) force.

</table>

Figure 111. Installing Pulleys and Belt (Over-Mount Gas/Electric Drive)

3.35.6 Attach the Hydraulic Hoses (for Over-Mount and Under-Mount)

1. Connect the hoses (3, 5, and 6) to the hydraulic pump (2), wheel move spool valve (not shown) and hydraulic oil tank (1) (see Figure 112 or Figure 113).

2. Add hydraulic fluid up to approximately 2" [51 mm] from the tank opening. Use the hydraulic fluid noted in the Specifications chapter.

3. Replace tank cap.

4. Test the function of the hydraulic system.

5. Refill hydraulic fluid up to approximately 2" [51 mm] from the tank opening.

6. Replace tank cap.

7. After the conveyor is completely assembled, place finishing zip-ties on all hydraulic hoses to ensure all lines are snug in place.

### Figure 112. Hydraulic Hose Routing for Over-Mount Gas/Electric Drive

![Diagram of hydraulic hose routing for over-mount gas/electric drive](image-url)
Figure 113. Hydraulic Hose Routing for Under-Mount Gas Drive

Note
The hoses are shown in Figure 113 on the outside of the under-mount arms for clarity, but they are actually routed on the inside of the mount arms.

3.36. Install the Shaft Guard

1. Mount the shaft guard (2) over the roller shaft and onto the flange bearing carriage bolts (see Figure 114).
2. Secure the shaft guard in place using two locknuts (3) and two flat washers (4).

Note
When mounting onto a 15/16” bearing (FL210), use 5/8” locknuts and flat washers. When mounting onto a 1-1/4” bearing (FL206) or 1-1/2” bearing (FL208), use ½” locknuts and flat washers.
3.37. Install the Inspection Step

The inspection step is used on conveyors with a gas engine or electric motor.

1. Position the inspection step adjacent to the portion of the axle frame with anti-slip tape (and below the gas engine or electric motor) as shown in Figure 115.

2. Attach 5/8" x 2-1/2" u-bolts (2) from the underside of the axle frame and through the inspection step (1) with 5/8" nylock nuts (3) and 5/8" flat washers (4) (see Figure 116).

3.38. Install the Manual Container

1. Position the manual container (1) on the axle arm.

2. Depending on your type of container, either:
   a. secure with two gear clamps (2) (see Figure 117), or
   b. secure with two self-tapping screws (3) (see Figure 118).

**Figure 117. Clamp-on Manual Container**

**Figure 118. Screw-on Manual Container**
### 3.39. Attach the Jack

1. Insert the jack (1) into the jack stub (located on the conveyor hitch) (see Figure 119).
2. Secure the jack in place with the pin (2) provided.

5. Appendix

5.1. Bolt Torque

Table 59 gives the correct torque values for various hardware. Tighten all bolts to the torque specified, unless otherwise noted. Check tightness periodically, using Table 59 as a guide. Replace the hardware with the same strength bolt, contact AGI if you are unsure.

Table 59. Recommended Bolt Torque

1. Torque value for bolts and cap screws are identified by their head markings. Established at 75% of yield strength of bolt given the cross-sectional area.

Notes:
- Torque figures in table are valid for non-greased or non-oiled threads and head unless otherwise specified. Therefore, do not grease or oil bolts or cap screws unless otherwise specified in this manual.
- When using locking elements, increase torque values by 5%.
5.2. Fittings Torque Values

These specifications are for carbon steel. With Zinc plating always lubricate threads and seals. For stainless steel, use the high value of the torque range of steel. For brass, use 70% of the torque value of steel. For mixed metals, use the torque of the lower of the two metals. Torque range is normally calculated +/- 10%.
