

Seconds Matter:

Grain Bin Rescue Tips

If an emergency occurs, follow these critical grain bin rescue tips.

- If trapped, stay calm.
- Call 911 and provide details including the bin's address or GPS location.
- Use a hat to cover mouth and nose. Assume a fetal position to shield the face and create an air pocket.
- Prepare for emergency responders to arrive. If in a remote area, send someone to meet them.
- If the victim is below the grain, turn on the aeration system to increase air flow and aid survival.
- If the victim's head is above the grain, talk to the victim from outside the bin, tell them to keep still and do not turn on the aeration fans.
